

all right welcome to coffee with marcus this is episode 163 can you believe it hey i thought today we do something special that i'm showing you the traits that i entered today and i'm actually going through my thought process of why i entered exactly those trades and why i passed on some other trades and this would be according to the wheel strategy and i i thought that you might find this helpful so if you agree that this would be helpful click on like right now and let's get started this show is about real money and real trades i'll show you the trading strategies that i personally trade the tools that i use to trade my own accounts and we will talk about the right mindset of a trader now talking about mindset i'm going to show you how to create src profits and src stands for systematic repeatable and consistent because that is the key to long-term success in the market so if you are sick of all the hype and empty promises and you want to learn trading strategies actually work then click on like right now and let's get started all right what a crazy day in the market and this is why it is perfect to enter actually some trades according to the wheel strategy uh let's jump over on the charts and see what is going on today and then i will show you the exact trades that i entered today why i took them and why i pass on some others and we'll see maybe there are some more trades that we can take right now since the markets are still open so looking at the indices right now so we

What's Happening In The Markets

see here that dow jones is making a new all-time high today so the dow jones right now up what almost 0.3 percent on the other hand the nasdaq is down more than two percent now the smp is somewhat caught in the middle and it's down point seven percent so this is actually a perfect day to go shopping for trades according to the wheel strategy so let me just show you this map here from uh from finn mc which is just illustrating perfectly what is happening today so i'm just going to draw a line here and in the upper left up here we see all the

growth stocks and as you can see pretty much all of the growth stocks are down significantly today microsoft being

down almost two percent apple more than two percent google two and a half percent facebook four percent amazon almost

three percent tesla five and a half percent and then on the other hand we have here the good old value stocks and these value stocks are all up today i mean household names like procter and gamble here we have walmart uh we have what ge we have cvs all of them are up so this is the perfect day to actually look at the wheel strategy

Trades I'm In & Trades I Passed On

and see if we can find anything so i thought i'll do it live together with you here so that you see of why i took the trades that i took and why i passed on some others so let's jump over to the powerx optimizer this is the tool that i personally use to find the best trades by the way if you're new to this channel and don't know what i'm talking about with the wheel strategy i have a book for you

it's called the wheel options trading strategy you can get it on amazon for what 25 bucks or on my website for 4.95
and i'll link to a playlist in the description where you can learn more about this strategy but uh so this is the tool
the powerx optimizer that i use let's go to the wheel analyzer and
see what's on dock today so as we are going to the wheel analyzer uh let me just actually click on amd so
that i can explain to you what you're seeing here and first of all up here in the upper right we have the
wheel scanner it refreshes every two minutes and shows me stocks that are technically meeting the criteria and now i can go through this list and mark it with happy faces as you can be sad faces for i don't want to trade this or uh you see it a little bit almost here
picking up maybe so then here we see technically
what we could do so right now if we take a look at amd we see the
chart of amd here and we see oh my gosh if right now we are looking at a strike price of 72.50 which would be somewhere around here right we can
sell a put and for selling a put we are collecting a premium and we can collect a premium of 71 cents so this means that based on the buying power that is needed we would make around 30 per year annualized if we are doing this so a few things and this is where i want to show you of how i'm going through this when i do it so the first thing i'm actually getting
rid of all the annotations and start again so there's a few things
that i like to look at first of all the key question is do i want to own this stock
amd at the strike price that is suggested right here which is
right now 72.50 and uh just looking at this chart
i see that there's some solid support at the 7250 level so yes
this would be a stock that i wouldn't mind owning now the next thing this is where i'm flagging it with as you can see a little smiley face and say yes this is a stock that i like so the next thing is i want to see okay how many days to expiration do i have and preferably i like to collect weekly paychecks so i want to see is it possible to get enough premium for this friday so that the dte is actually less than five days this would be perfect
so here right now it's 11 days so it's it's not bad so amd is definitely a possible candidate uh but let's actually go through the list and see if we find anything else
now as we are going through the list so the next stock that is coming up here on the list is cgc canopy growth corporation
now here we see this crazy chart and we see that the suggested strike price right here is 22 so now the question is
do i want to own cgc at 22 if i'm getting assigned
because when you're trading the wheel the idea is that you're selling puts and collecting premium then you might or
might not get assigned and if you are assigned number three you would sell calls but the key is if you are getting assigned do you like this stock now if i'm looking at this stock it was going crazy up to what uh 57 up here and then plummeting all the way down to right now 24 18. so for me this is a crazy stock and for me this is not a stock that i want to own at any level but but again this is where it might be

different for you so the key question really is do you like the stock and do you want to own it at this price and right now of 22 because that is the strike price that is coming up and for me that is a no and this is why i'm flagging it as a no so anyhow so uh going through the list looking at crsp crsp therapeutics and this is where right now you see it's pretty much the same we can actually get some good premium at a strike price of 85. you see it right here we're getting a dollar 10 in premium that is not bad annualize this would give us 39 so that's pretty good but this here looks pretty much like like cgp uh or what was it cgc right it was going up like crazy from what thirty dollars all the way to two hundred thirty dollars then plummeting down a drop of 50 to 110 dollars and right now moving around here so again the key question is do you want to own this stock and if you know something about crispr therapeutics and you say oh my gosh they are awesome they are the best company ever and you want to buy them at a discount at 85 then it would make sense for you to sell this put for me this is not a company that i like so again here a frowny face like no thank you not for me so here's another one uh that i haven't flagged just yet so if you see right now it is actually neutral which means that i haven't had a chance to look at this this is why i thought hey let's do this together so first of all the strike price that we are looking at is 44 so it would be right here so this is the strike price and uh this is uh the i shares uh let's just go a little bit bigger so that you see it the i shares china large cap etf so this is a this is an etf that is tracking large cap stocks in china and as you can see i mean this had also pretty impressive run up here all the way from 35 to 55 and has now retraced to around 44 so we are trading on on half of this so again the question is do you want to own an etf that mirrors chinese stocks at 44 knowing that it could go higher or it could go lower so for me this is one where i would say no thank you not liking this one so you get the idea uh we are going down through this list of everything that is popping up here fairly quickly next on the list is gamestop now gamestop i don't know you might have heard me saying this if you want to trade gamestop that is good for you if you want to own gamestop this would be a possibility because as you can see there are strike prices popping up at around 110. so if you like this stock and you would like to own gamestop at 110 then by all means sell puts you're getting some really good premium as you can see 52 annualized that you could get here for me that is not really a stock that i like to trade because you might have heard the story i mean this went from next to nothing all the way up to 500 came all the way down to 30 so from 500 to 30 then went back up to 350 so for me this is an absolute crazy stock and this is a clear no for me so um i want to show you before we move on going through the list here i want to show you the stocks that i took today the trades that i took today so this morning we were trading together with our mastermind members and this is where we found a few good

opportunities that popped up on the scanner and this is what we do when we are trading together we're just going through it live and al

and martha mark we provide our input to let everybody know what we think about the stocks is this helpful thus far uh if it is do me a favor click on like because this way more people are seeing this video and i thought it would be cool to see real trades real money so let me show

you actually the trades that i took this morning so this is where we are going to the calculator and i want to first show you the two new trades that i took this morning so one of them was snap and i'm going to zoom in here a little bit so that you see it so this morning when we took the trade

snap was trading at 52.50 and we had an opportunity to take the 47 strike price and receive 25 cents per option traded now according to my account size i could trade 21 options and you see it here the dte the days to expiration is only four days so this is what i like i like the idea of weekly paychecks and this is why i thought okay this would be perfect now trading 21 contracts means that i would

make 525 dollars no you can't see the 525 anymore let me just see if i can correct this look at this that did not work at all okay you get the idea 525 which means that i would make 105 dollars per day it means also that based on the price this morning snap could drop another 10

and i would still be okay so let's take a look at the chart so that you see exactly of what i did there so uh we're moving over there uh we are going to snap so as you can see snap right now is trading at 52.33 so very similar to where it was

this morning we sold the 47 strike price and the key question again is do i want to own snap at a price of 47. and if i'm looking back here pretty much uh until uh december so this uh the the last six months because right now as we're recording this video it is may what is it may 10th right so if you're looking back over the past uh six months we see that the 47 price actually probably the 48

price has been very solid support one two three four times five six times so solid support here and

it has been trading uh pretty much if you look at this snap has been trading between what i want to say 48 and maybe if we

draw a line here between 65. so for me this is where i say you know what i wouldn't mind buying snap at a discount because if this has a possibility to maybe go back up to 65 i'm okay to own it

at a price of 47. now this assumes that it would go below 47 on friday so today is monday again we have four more days until expiration but this is here um this is here a stock that for me is a stock that i wouldn't mind to own and again you can have a completely different opinion and that is okay right so

uh also with the other stocks this is why when we are using the powerx optimizer see people ask me all the time if we can make these uh these smiley faces in the way that i like to trade the stocks but you see it doesn't really matter because everybody has a different outlook on stocks

there might be some of you who actually love the idea of buying gamestop at a discount of 110 because you might believe that it goes up to 200 or 300 and all of this is good okay anyhow so this is the first trade that i entered this morning is this making sense of why i entered

snap here and why we thought that this was a good trade okay cool uh webby is asking snap is snapchat yes

it is yes it is it is snapchat so yeah uh the other one

uh that popped up this morning that uh we liked and we traded in our mastermind group is sq so sq is a little bit a higher price star it's square right i mean you know these little things where you can take payments on so it's payment processor this morning when we looked at the stock

it was trading at 221 and 91 cents and we had a possibility to sell a put at 200 and 250 so i got a dollar in premium and this means since i was trading five contracts or i am trading five contracts that i would make five hundred dollars and uh this is again based on uh the next four days so i'm looking at a around a hundred dollars per day or

a 36 ri so i thought this is pretty good so this way we already have 500 here and then if we zoom out another 525 dollars here

so thus far on only these two trades that would be a thousand dollars for the week which is not bad at all and the week has just started so let's take a look at the chart here

to show you why i chose this one and if you take a look at square

it looks very very similar to snapchat wouldn't you agree so over the past six months if you're looking back at december we see some actually pretty solid support around uh 200 and 250 to 200 right we see that support held once here

twice three times four times five times six times so it has been trading between 200 and uh if you just uh look at this maybe 260. so it has been

trading here in a range and right now if i can pick it up and buy

some of this at a discount what i think there's a good possibility that it bounces back up to 230 240 250 maybe 260.

so uh i i like this idea here and i like the premium i like the strike price

because if you're looking at this on the wheel calculator so this means that also in the same way as snap can drop right now another 10 this can drop another 9 and i still

would not get assigned so these are the two that popped up this morning that i liked

um if you're looking at the at the scanner right now so one of the trades that is popping up right now that i was trading recently is is actually a g let me just bring up the chart here so ag it's actually a pretty cool trade so as you can see i flagged it

with a smiley face because i like it so right now you could get the 1450 strike price and the question is do you like to own ag which is a first majestic silver corporation so i i would assume that they are mirroring the silver prices do you want to own this at 14.50 right now it is trading at 15.85 the one thing that i do

not like about this is again the dte the days to expiration i like to go for

shorter term trades that are only lasting four or five days because i like the idea of weekly paychecks and this is why right now not too interested in this uh

we could see if maybe there's enough premium in this week's uh put but uh just looking at this here

no thank you all right i want to go through a few others uh so go to i haven't uh i haven't fixed this one uh previously they have changed the ticker symbol previously this has been gsx so if you have traded before you might know it under gsx and they just recently changed it to go to as you can see i have not looked at this today so right now um it's trading at around 25 and we could actually go for a strike price of 19. but the question is do you want to

own go to at 19. i mean it has been trading here at 20 moved all the way up to 150
came all the way back down up and down and i mean wow for me this stock is way too crazy
for you it might be that you say you know what loving it this is awesome yes i would love to
own gsx
or as they're called right now go to i would love to own them at 19
because i know something that nobody else knows uh i have a friend who's working for them and
they're about to blow i don't know
something like this so anyhow um don't like this one and this is why
right now i will flag this as a no and there we go so um let's just see
a few others that are popping up okay as you can see here i just scroll down to see which are
marked so snap
is still right now on dock and as you can see uh you can get the strike price of 20 here that
expires on may 14th
right now you can get 10 cents so uh this would give you 37
annualized i'm going to zoom in a little bit so i i still believe that this is probably a pretty good
trade here and
this is why i marked it with a smiley face all right cool uh so let's see
what else is popping up there there's a few that i marked as a maybe as you can see here mu
and neo so let's take a look at this let's actually take a look at mu with this micron technology and
so micron technology as we see the 77 strike price is popping up here
so if you put it on the chart the 77 is right here right so this would be a 77 strike price
and now again the key question is do you want to own micron technology
at 77 now if you're looking back here over the past over the past
what six months which is approximately here we also see uh that it has some solid support here
at 76.77 so has been going up and down so not too crazy here
it's been trading pretty much between in a range between what 80 and maybe 95
somewhere around this so this is why i flagged it as a maybe it's a possibility i don't like it as
much as i like sq and snap but uh yeah i mean why not it
expires this friday so you have four days to expiration right uh the buying power required is
seven seven thousand seven hundred dollars and based on the buying power you would
make 34 um annualized that is not bad at all that is not bad at all you see uh if
based on this buying power here uh if you can make around 30 to 40
per year if you're using a margin account this means that you would make between
60 and 80 based on the cash and i think this is a really really good
return i mean wouldn't you agree so anyhow um these are the trades
that uh that i'm actually in that i took and uh oh pins is popping up look at this pins
just popped up you see uh it just came up here and this is a trade that i took recently
i am not as happy with pins anymore as i was see previously i saw that there was some
some solid support probably around the the 62 level yeah so this support right now
has been broken to the downside we are trading at 58. so therefore right now um even though
previously i liked it right now i do not like it because i don't see
strong support here anymore so and this is what i want to see i want to see strong
support on the chart and again the support previously has been somewhere around
between 60 and 62 and since we are trading it at 58 right now so for me this now
is a no don't like it as much as i used to uh previously i did no i don't so this
is where also um we are planning to to reset the flag so that it doesn't happen to you that

for example uh you have a you have a red flag on some of these stocks and then they actually look pretty good here um but let's just uh sort this to see if anything else that came up ag we talked about this

vips came up so vips i haven't flagged yet so we can take a look at this together and vips is a vip shop no idea what these guys are doing um

right now we see that strike price is at around 23 so if you like the idea of owning vip for 23 then this is a trade that you should take for me not really because you see they came from 12 went all the way up to 46 this is what 400 percent a 400 increase and then they dropped hard to 25 here so um this way yeah

not the biggest fan of this one not for me so for me this would be a no but again for you it might be a guess so i i still like a g here uh would like to see that uh we we have maybe a shorter term trade that doesn't go for 11 days that only goes for four or five days but here's the

good news i mean since the markets today are kind of crazy i mean just just look at this if we are zooming in here you see the dow right now is kind of flat uh the smp is down 0.9 percent and the nasdaq is getting hit hard by 2.45 down i believe that this will be the theme of the week so therefore when going shopping and this is what i did today i don't need to go shopping and spend all of my money today because let me show you one more trade

again before i show you more trades is this helpful i just want to show you another trade that i'm in right now

and uh if you like this again click on like see that uh three people do not like me going through trades and that's cool hey there's plenty of other videos here on youtube so whatever you like best i don't have any cute kittens that i can show you all i have is real money and real trades and i know sometimes that might be boring for me it's really fascinating i'm loving it so but i want to show you a trade that i'm in so it's lvs

so here's what i did with lvs i'm going to zoom in a little bit so that you see it so with lvs there we go i sold a put

with a strike price of 58 because i thought yeah you know what we have some support here here we have some more support here and here and then we were going up and i thought hey you know what it's nicely trading in

a range between what 58 to around 66 if we go up there

so i thought you know what this is pretty good support here's what happened on friday on friday it dipped below 58

and therefore i got assigned so right now i am owning 1 700 shares of lvs

and at a price of 58. now today they are down to 57.17

so i'm losing some money on the shares but this is where i said earlier um here's what we do with the wheel

strategy number one we are selling puts on stocks that we like and we don't mind getting assigned

at the strike price this is so important let me repeat this we are selling puts on stocks that we like and we don't

mind getting assigned at the strike price you see if you are if you're selling a

put and then on wednesday or thursday you're sitting there and saying ah i might get assigned i might get

assigned then it wasn't a good start to begin with yeah the goal here is that on wednesday

or thursday you say ooh i might get assigned i might get assigned right if this is your reaction then you pick the right stock and i thought on thursday or friday when it looked like i might get a sign i

said i'm getting assigned on lvs i'm getting a sign because here is why i want to show you what exactly happened here on lvs what i did there so let's go back to the power x optimizer oops there we go to the power x optimizer we

are going to the wheel calculator and now i want to show you lvs

so here's what happened last week last week we're looking at this column right now i sold puts and i collected 595 so i collect this premium regardless of

whether i'm getting assigned or not so then today this morning we got to go to step number two so this here is step number one selling puts step number two is selling calls once you get assigned

remember the three steps one you sell puts you might or might not get assigned and then you sell calls

one two three it's that easy um so anyhow so this means that the stock purchase price and i'm zooming in here right now was 58 and i got assigned 1700 shares so this morning i sold a call a 59 call for 70 cents

that expires on march 14th now there's two things that can happen

either by the end of the week by march 14th which is the end of the week um lvs will be trading above

59 if this is the case i'm getting one thousand one hundred ninety dollars in premium for my option plus plus i will make more money on the stock so my total gain if it moves above 59 the so this is here for larger than 59 will be 2 890 if it stays below 59

i will only make twelve hundred dollars so you get the idea so where do we stand for the week here thus

far let me just uh move back here so that you see what is happening here this week so

uh first of all i'm right now i mean this is what will happen for sure

because i will always keep the premium so i'm making definitely 525 dollars plus 500 plus at a minimum at a minimum

one thousand one hundred ninety dollars so this is like a thousand so uh at least thus far and today is only

monday so this week i will make at least twenty two hundred dollars and if everything is according going to plan uh and lvs is closing above 59 on friday

i will actually make another fifteen hundred dollars so this would be three thousand seven hundred dollars

so this is and i it's today it's only monday so there we go anyhow so um

this is uh where i wanted to show you of what i traded today and now since you are here live i Deep Dive Q&A

want to take a look at the questions and see if i can answer as many questions as possible and i know that right now

there's more than 600 people watching us live so let me just jump on into the chat box

here and and quickly see if we can answer as many questions as possible

so i need to have my my handy-dandy ipad that i use for my drawing you see this i

need to have it tethered i probably should look for a longer cable that would probably make sense

so because right now my cable is in the way anyhow good good good so uh let us see let's take a look at some questions so good to see everybody here so claire says bad day all around can't even type correctly the two stocks that are down are csig and chewy again csig not my favorite at all right and again if you like csig uh claire so that's uh that's up to you uh for me this is not a stock that i would trade at chewie going back and forth uh so we have been discussing it in the mastermind and uh not really liking it but you see today chewie here's the reason why chewy is going down let me just uh show you uh so you always have to see what does the the rest of the gang to do right and uh if you're looking at the map so chewie is delivering dog food and dog toys and pharmacies yeah and you see that amazon today is going down 2.7 and so is chewy it is just overall the rotation uh from this growth stocks into value stocks here so i wouldn't be too worried about chewy it'll probably bounce back up here so it'll be okay so uh mike says my portfolio seems to me of the opposite from the market well okay just make sure the rule number one pick stocks that you like to own that is so important here hey teresa so good to see you um good good good all right greetings from toronto all right let's uh let's actually go for the questions and johnny says look at the dow chart time for a bear call spread oops wrong channel you see um i'm not the biggest fan of spreads we will talk about this probably in a next week in coffee with marcus because i want to share uh the the bear uh what do you have the beer call spread or bear put spreads and compare them to what i'm doing here so you see with with spreads you're buying some insurance which i don't think is needed but i'll compare these i'll compare these okay so frank says uh how to zoom in in the pa new pxo um in the same way as you scroll down and up a page so if you're just clicking on the charts and it's like scrolling up and down so you see for me i have a trackpad and a mac it is just scrolling down and scrolling up with two fingers here okay good let's see um so alex got stuck with covered calls um didn't kind of quite catch in what stock chat is going on for so cheap uh for so quickly here okay um so johnny says i want to own all my trades until i get a sign then i want out i hear you so this is where it really pays to think twice or three times or four times before you place a put and not just look at the premium okay so dell says sold amd put today i think amd was a good one today good okay good uh webby says canopy might be a pot stock it is it is it's not my favorite it's like till ray i mean they're all over the place it's just crazy okay so um yeah lonnie says stuck in tillery working my way out good luck with this i mean this is not a stock that i want to be in if it goes so crazy i don't want to do this so webby wonder says tried biotech got my fingers burned i hear you biotech can be crazy with trials that they have going on right and then a trial is successful or not and uh phase two and phase three and all this kind of stuff anyhow

good good good so mh says gotta sign etsy at 170 current price is 168. uh love the stock
how aggressive would you be on the call strike price depends on how much you love the stock
right i mean if you just want to get out of this
then you would just sell a call at 170. if you see enough premium at 171 172 do
this in general you see it makes more sense to sell calls when the market is up and today i would
assume that etsy is down like the overall value growth stocks here so maybe wait until it pops up
a little bit
and then you can probably sell the the 171 172 maybe even the 173.
so really depends on how much you like the stock and johnny option finder said well as soon as i
may not want to get out if this is you
then just sell the 170 call this way you get out of the stock and you're lowering your your cost
basis here anyhow
so um good georgia says the zoom in so helpful much easier to read yes you can do this right
now okay
good so let's see jake says a lot of stocks had a nice run but are now falling it's because you have
the rotation going on and i i wouldn't worry
about one day i mean the nasdaq where did we end up let me just quickly see of where did we
end up so i'm sharing my screen so nasdaq is down two point uh 2.6 so that's uh that's a lot for
the
nasdaq let me just bring up the charity of the nasdaq so as you can see this is a pretty significant
drop but this is nothing
i mean we're just coming from highs here and uh we can take a look at this uh if you're looking at
the high of 14
000 here approximately and right now we are down like what 700 so this year is just a drop of
five percent
that's nothing right i mean a correction is defined as a drop of 10 so if we go down all the way to
what 14 to 12 600 so if you're going somewhere here right i mean this would be a
correction so if you're going down to 12 600 this year is what the nasdaq does
all the time going up and down it's called normal market fluctuation okay good good good so
uh let's see what other questions we have uh nathan's head was uh signed on riot
at 37 sold calls today against my position and uh yeah i mean right we can take a
look at this really quick see what uh what ride is doing uh it's it's a good stock
i i've been trading riot and mara so uh you have been assigned at oh 37 wow that's uh that's pretty
high
i would not have taken that because this is where again where do you see some support here
right and if you're looking at some support i would say that there's probably more support
somewhere here at around
34 to 35 so i think the 37 was a little bit too aggressive and again the key
question is do you want to own riot at a price of 37 and nathan if this for you is like heck
yeah of course then good um anyhow so del sol snap also
okay chad got into snap fantastic yes snappy snapchat exactly okay jenny got into
uh overstock we can take a quick look at overstock here uh to see what's happening with
overstock oh let's just
see let's bring it up here and ostk oops
so um overstock there we go so you got in you said at 70 today
you see this where i'm not quite sure i i don't understand why because for me there would be

definitely more support at 60. do you see this this is where we had support here one two three four times so 60 for me is solid support 70 is right here so this is 70. why would you do this i mean again again if you love love love overstock and maybe you're shopping on overstock all the time and you love this company and you think that overall oh yeah they will go back to 104 then this is okay for me i'm definitely more conservative so for me the 60 uh would have been a much much better choice here than the 70. but again every trader is different and jenny if you love it at 70 again the key question is do are you okay owning overstock at a price of 70. i would be happier owning it at 60. okay anyhow cody love this video okay cool yeah johnny yeah johnny c is the same as i do here osdk support at 60. exactly uh so gerald is asking how many companies would you suggest to trade each time for me personally it's five no more than five depending on your account size if you have a smaller account start with three so once your account is above 50 000 i would say you can go to four or five if your account size is below 50 000 or you're buying power let's talk about buying power is below 50 000 i suggest that you do three general is this helpful okay aggie's asking what do you think of talent here talent here's a crazy stock i mean take a look at this i mean uh let's just go to pltr i mean again for me it is crazy because if you're going back and zooming out look at this this is what the stock did i mean it started trading here at uh what around uh ten dollars so this is here around ten dollars went all the way up to forty five dollars came all the way down to 25 and it's now definitely on its way down so 1847 i believe that this could actually go all the way back down to 10. so uh this is possibility so for me that is not a stock that i would like to own anyhow good uh so mike says do you do any fundamental analysis no for me it's more like do i know the stock and do i like the story right so and for example i know the stock i like the story and has been around forever they know how to make chips they have one major competitor the major competitor is intel there's a few others popping up right now apple is making their own chips but overall i mean we have a semiconductor shortage right now so chips are in high demand they're in everything right now they are in ipads they are in your watches they are in your phones they are in your fridge they are in your microwave i mean there's chips everywhere they're in cars right so this where i think it would make sense um so palantir on the other hand don't know so this is the kind of fundamental analysis that uh that i'm doing okay cool so uh georgia says uh this is great would you consider doing the same type of video with power x traits yeah i did recently i can do some more um i can maybe let's see i've planned something for

thursday so maybe next monday we can go through a few things here georgia we can absolutely do this okay

jake says urgent earnings on the third 13th okay so yeah that's another thing to to check just to make sure as soon as you bring up your trading platform you'll probably see that that there are earnings coming up and then you would skip this okay um arc yeah you can do this arc at 94. arc is not bad i mean arc investment funds kathy woods uh fund not at all bad okay good atx pinery says i like the idea of weekly paychecks too good fantastic good joe says i would

like to see in future release to be able to only see opportunities that expire next days we are working on this it's planned for a version 2.2 or 2.3 i have

to look up our our road map so we have a road map where we have planned out the versions up to 2.6 right now as you

know we are 2.0 so the next is the broker integration but yes absolutely it is on dock it is going to happen

yeah jim also yeah can't wait until i can filter out expiration dates beyond this friday we're probably uh six to eight weeks away something like this right just to give you an idea all right

cool cool cool um aggie says why don't i get the same stocks when i run the scanner i don't know uh contact the team

uh at uh support or even better you know what just go to mighty networks post the screenshot in mighty networks

that's our private members area here and when you do this uh this the quickest way to help so just go

there and uh it'll be fine good all right um ben says do you watch for earnings dates before expiration yes i do not like to trade into earnings right before expirations

so i want to make sure that we have earnings after my expiration year okay good

so vanguard actually requires options level two to sell cash secured puts go to uh

rockwelltrading.com broker there's a broker that we are recommending i did a video on this uh you can look on this channel here or i

post the link in the description the broker is called trade year if you use the link

rockwelltrading.com

broker you're getting a special deal and they're way easier with these option levels because they are from for

active traders here okay uh webby says pins look scary to me

right now i agree i agree good all right so let's see um i have to run a mescu a

rescue mission on gsx yeah this was my my first choice i mean i i don't like this

so really make sure that you love love love don't only look at the premium that's the worst thing that you can do get blinded by premium

so just make sure that you say yes i would love to own this stock here

okay um will you not exit the stock even when it gets assigned when major support has been broken

uh you see you don't want it here with the wheel you don't want to exit with a huge loss there's a ways how you can

fly rescue missions i did a video on this take a look at this i'll link to it in the description this way you can take a look at the

video of what i do i like to bring my cost basis down and at the same time bring my break even

down so that a small pop is actually helpful here so anyhow
good fernando so good to see you the scanner is the best investment i've done in recent years
yeah if you um if you're interested in the software we have a website it's called powerx optimizer
so feel free to go there you
find all of the information there and if this is uh helpful then uh yeah
you might consider investing in the software if you can make a few hundred dollars each week
you will have your investment recouped in just a matter of weeks so anyhow good okay elena
good to see you here cody love it okay so patty uh webby says i love coffee
with marcus every day i'm trading with my mastermind every day i don't know if they're sick and
tired
of hearing me it's my head coach mark hodge and i so this week we are having a whole week
of trading usually we do it three times a week this week we're trading together every morning
but yeah it would be too much for me to do coffee with marcus every day anyhow okay drew um
okay i entered snap
today good i think snap is a good one it's a solid one okay so lewis says is there any email
address
that i can question sue that uh i might not make it onto the live chat absolutely uh you can even
text us so
call or text the office you can call if you want to talk to somebody feel free 512-337-1885 or you
can text
if you prefer texting or you can just email to support rockwelltrading.com i know
there is so many uh questions here i try to go through as
many as possible um anyhow yeah just uh shoot us an email we'll be happy to help theresa in the
mastermind
yep hey we did it this morning teresa what are you talking about we looked at so many stocks
this morning together how
many stocks did we look at like 10 12 maybe 14 15 and we found these two and they're really
really good
okay good claire's asking how far above the assigned price do you go to sell calls
really depends how aggressive you want to get rid of this stock right i mean if you like this stock
so let's go back to lvs
for a moment so lvs is a stock that i'm in as you know so here i decided for lvs you know what
you could actually say i do believe that lvs will actually go back up to 62. so in
this case you would sell the 62 call for me this is a shorter term trade if i can make what 2 500
in one week and this would be in addition to the 500 for next week i'm going much closer i'm
not greedy the markets have taught me when i'm greedy it's never good so this
is why i sold the 59 so if you see a quick pop here i'm already out of this but i would make
around three thousand dollars um on this stock so and i'm fine with that i mean
three thousand dollars in two weeks that is not bad at all okay hey um
tajan said uh you said uh may 14th oh i said march yeah i mean may 14th we
got this right today is may 10th and yes this is live sometimes i get the question i don't think this
is live this is
recording no right now it is may 10th and uh it is uh 4 4 19 eastern time oh my gosh we are
already a little bit over time hey um was this helpful at all if it is click on like and please share
this
video with as many people as uh as you can alright so that more people are seeing the good stuff

real trades real money and if this was your first time here and you enjoyed it and click on subscribe hit the little notification bell because this way you get notified whenever i go live or release new videos and right now we are releasing uh two videos and then i'm going live with coffee with marcus twice a week plus with the stock market update in the morning five times together with my head coach mark hodge so this is nine videos per week on this channel so i think you should definitely subscribe subscribing is a good thing subscribe right now hit the little notification bell okay i'll see you in the next video take care everybody
