

welcome to coffee with Marcus this episode 168. today I want to show you my trading routine or I want to show you how I made a little bit over 26 000 in a month so I'll show you exactly the strategies that I use the tools that I use and what exactly I do every morning to do this because I'm not sitting in front of the screen all day long all I do is in the morning for 30 minutes maybe 45 minutes at most I'm using my tool the power x Optimizer to find the best trades to take and I want to show you today exactly how I'm going to do this so let's get started this show is about real money and real trades I'll show you the trading strategies that are personally trade the tools that I use to trade my own accounts and we will talk about the right mindset of a trainer now talking about mindset I'm going to show you how to create SRC profits and SRC stands for systematic repeatable and consistent because that is the key to long-term success in the market so if you are sick of all the hype and empty promises and you want to learn trading strategies actually work then click on mic right now and let's get started all right fantastic so first things first why you should you spend the next 30 minutes or so with me at all well first of all I'm a real Trader and I'll be happy to show you my real account so as you can see thus far uh for this year I've made a just shy of 85 000 and uh this is only in five months so if you break it down that's around seventeen thousand dollars a month I think I ran the exact numbers and it was 16 969 anyhow so seventeen thousand dollars a month covers my living expenses so this means that I trade for a living and if this is your goal if you want to trade for a living I want to show you today my trading routine and I will show you exactly what I do every single day now um let me just bring up a notepad here because in order to become a 3 Things You Need To Be A Successful Trader successful Trader I believe you need three things the first thing is that you need to have a trading strategy that is super important and a trading strategy basically tells you three things first of all it tells you what to trade it tells you when to enter it tells you when to exit that's also super important and we'll talk about this and that's in a nutshell what a trading strategy does so you don't have to make it super complicated now the second thing that I believe you need in order to become a successful Trader is oops that's not what we wanted to do there we go powerful tools and I will show you the tools that I use in my trading today and number three you need to have the right mindset and the right mindset is that you're not going for the windfall wins because uh yeah everybody can get lucky and make a lot of money on one trade but you see for me it is important to generate SRC profits and this stands for systematic repeatable and consistent so having said this I want to show you right now my exact trading routine and what exactly I do the strategies the tools my mindset and uh let's just get

started so I personally trade two different strategies the the first strategy that you might know is the power x strategy that is a trend following strategy and you see um one of the problems that most people have with uh trading stocks and options is overthinking happened to me and

because the power x strategy is based on just three popular indicators the McD the RSI and stochastics it's hard to get

too complicated so the power x strategy is a simple yet powerful Trend following strategy and to outsmart the other Traders you need more than just apply and you need an edge and the power x

strategy relies on time tested methods that I have been using for the past eight nine maybe ten years too many to

keep track of and the second strategy that I like to trade is the wheel strategy and the wheel strategy is

perfect for a sideways market so let me show you what exactly I do every single

My Morning Routine

morning this is where uh we jump back on my iPad here and I have the tool that you might or might not know yet uh it is the powerx optimizer and as you can see

in this tool I basically have two tabs for these two strategies for the power x

strategy and also for the wheel strategy so uh going back if you just uh think

back for a moment what I said a trading strategy so we need to know what to

trade and right now I want to focus on the trading strategy the power x strategy and in order to find what I

trade I am using a powerful scanner here and this is what I do every morning all

I do is I click on run scanner I select a few criteria here and the criteria

that I use is that I like to take long trades only because I have experienced

over the long run long trades are outperforming short trades I want to see at least East a forty percent return

investment so I want to make at least forty percent per year on my Capital this is where we go back to these SRC

profits right because if I can make those systematically at a minimum forty percent uh then I can grow any account

right any any size it doesn't really matter okay um so anyhow I'm also want to have a

minimum winning percentage of 40 so I want to be right at least four out of ten times I have my my closing prices

that are set between two uh five and two hundred fifty dollars profit Factor higher than uh two and a minimum volume

of 500 000. now so all I do every morning is I click on scan and I do this

at 8 15 15 minutes before the markets open now it will take a few seconds here

until the scanner is done uh usually takes around 20 to 30 seconds because now it is going through the database of

I believe we have 12 000 12 000 stocks in the database here

and uh finds the one that meet my criteria and here's what I do next as

you can see there's a list that came up here uh I'm gonna zoom in for a moment so in the upper right hand corner here

are the scanner results and the list consist of maybe 2 4 6 8 10 maybe 12

stocks and here's what I do now super easy super simple because as I said most

The PowerX Strategy

Traders are making it way too complicated all I do is that I bring up the stock and I look at this price graph

and what does this mean well it means that if I had traded this particular stock according to the rules of the power x strategy how much money would

I've made made and lost and how exactly would I have made it and as you can see in the beginning I would have lost money

then I made a little bit and then for the longest time it's going flat that I made a lot of money and it is going flat

and you know what this for me does not look good here's what I'm looking for as

I'm going through this list of stocks I want to see an equity curve that looks like this that goes from the lower left

to the upper right so therefore AMC for me is not a stock that I want to trade

and I mean no surprise there it's one of the meme stocks and if you have been trading these meme stocks and you're

making a lot of money on this good for you good for you again for me it's more about the SRC profits systematic

repeatable and consistent and I do not like stocks that provide me a windfall

profit but then for most of the time it is not doing anything so all I do right

now is I click on the list here and I just say remove it so now I'm going to

the next stock and this is calex and calex is already looking a little bit better so all I do is go through the

list and uh do a yes no maybe and for me this stock here is a maybe because it

does actually look pretty good so I'll leave this in here as a maybe as I'm

going through this list and now I'm going to the next one DQ and DQ looks

okay I mean not bad at all it's it's rather choppy here it's going sideways then it jumps up yeah you get the idea

so compared to to calax I I would say this here is yeah we can leave it as

another maybe in here as I'm going through the list so XP as it comes up a

expi uh you will see that this is a stock that is definitely more uh erratic

here and again this is where I'm just quickly going through the list trying to find

the best stocks to trade and this usually takes me anywhere between 5 and 10 minutes here so I can tell you for

today one of the stocks that I really liked was spce so I entered spce and I

want to show you some of the stocks that I'm in here right now so let me just

refresh the screen really quick because earlier I saved a few more so I am

currently in in six different stocks let me just jump over here to my trading

platform so that I can show you exactly which stocks I am currently in

so here we go the six stocks that I'm in according to these rules are

arwr c-e-l-8 plug spce

spwr entered that today and St AAA so these are the stocks that I have and uh

they just came up on the scanner so I can show it to you again so this is where if you look at arwr this is a

stock I'm zooming in a little bit that uh popped up a few days ago

and you see the entry signal was to go long at 73.96 and right now it is pretty much hovering around there I still have the green bars but uh yeah this hasn't

really taken off just yet which is okay not every trade is a winner keep in mind right then I have a c e l h and clh worked out really really great as you can see I entered it here at 54.08 and right now it is trading at 64.03 so uh this is actually a really good trade that is working out and again not every single trade works out here is plug that is another trade that I'm in and also plug is just uh peddling around here spce a trade that I entered yesterday is actually doing really well again going back here to my account and this is here I'm trading several accounts here with this one I'm trading a rather small account of twenty thousand dollars because I want to show you can traded with the power x strategy with a five thousand dollar account a ten thousand dollar account twenty thousand dollar account doesn't really matter so let's just take a look at these six trades that I'm in right now and we're looking here at the open p l and I just want to add it up here really quick so it would be 77.88 plus 340 dollars and fifty cents plus or 183 dollars and seventy cents plus four hundred and twenty five dollars uh and thirty cents and you see it changes all the time eighteen dollars and nineteen cents uh Plus um 428 and I believe I made a mistake by adding this of course we need to subtract it so minus 77.88 and I'm subtracting it one more time so I think that's a small mistake that I made in the beginning so if I would right now sell all of my positions these six positions I would make 1 317 now based on a twenty thousand dollar account this would mean six and a half percent six and a half percent is not bad at all because if I can do that every month times 12 I would make wow 78 and this fits my criteria of SRC profits now not every trade is working out as you can see this arwr is not really working out just yet but I haven't received an exit signal now let's talk about this um because this is where I want to go back to what does a trading strategy do well it tells you what to trade and this is where I'm running the scanner now it also needs to tell me when to enter and this is where today as you can see spwr is a trade that I entered today just earlier this morning as I went through the list and here you can clearly see that powerx Optimizer tells me when to enter it is a buy to open uh at 23.73 so here it does not only tell me exactly when to enter but also how many shares to trade and now we are going back to the third thing that a trading strategy should do and this is when to exit so also know exactly where to place my stop loss and where to place my profit Target and uh this is what I put in the market as soon as I'm getting filled because this way I can put the trade on set it and forget it because I don't know about you but throughout the day I don't like to stare at the markets I know that some Traders are loving it I love living my life I love doing other things throughout the day like for example recording this video here for you anyhow so this is what I do in a nutshell as I am going through the power

x strategy when I'm looking for trades according to the power x strategy now I want to show you what I do with the wheel strategy because I believe you see if you just have a hammer everything looks like a nail to you right you have heard this so the power x strategy is a

The Wheel Strategy

great trading strategy for a trending Market and sometimes the market is just going sideways or even slightly going down and this is when the wheel strategy is just perfect and I'm sure that you have heard about the wheel strategy you probably have read this book or gotten this book

or maybe you have seen some other videos by the way this book is available 4.95 on my website rockwelltrading.com anyhow

that's not what I want to talk about today so uh let's just talk about what I do so for me uh the markets open at 8 30

a.m in my time zone so at 8 15 that's when I'm usually looking for oops pxs trades there we go so P excess trades according

to the power strategy as soon as the markets open now I'm shifting my focus to look for wheel trades and I want to show you how exactly I'm doing this

so what I do is I click on the second tab the wheel analyzer and this is where again in the upper right hand corner I do have a scanner and right now as I'm recording this video not too many stocks are popping up on the scanner there's only one stop right now popping up which

is nvax usually the scanner is most active

um yeah the scanner is most active in the first 15 to 30 minutes so between 8 30 and 9 o'clock this is uh 30 minutes after the market open again for me I'm in Austin Texas this is a central time this is when I find the most

opportunities here um Okay so let's see

um of how exactly I'm using this so as a stock comes up it tells me the best strike prices to sell so I just click on this stock it brings up a chart here and as you can see there's right now several strike prices where I could sell option and again right now I don't want to

really go into the details of this strategy here uh but I just want to because I've had other videos for this I just want to show you what I do now first of all the key question is here that I need to ask

myself when I'm trading this strategy do I want to own

this stock and uh nvex looking at the chart here I

must say no I don't want to own the stock this seems to be very erratic if you look at the chart it is going all

over the place here right I mean it's this stock moves from around 120 here

all the way up to 340 comes crashing down to 160 goes back up to 260 goes

back down for me this is two regretting so therefore I would skip the trade however if I chose to trade this trade

to take this trade I'm just saying yes and I'm choosing a strike

price that I like best for example here the 125 the First Column let me just

zoom in so that you see it uh because this is where I see the strike price the

premium the expiration how much it could drop in percent without me getting in trouble how many days to expiration and

also my annualized RI and I'm looking for at least 30 percent per year here so when I click on the first one it automatically adds it to the calculator where it now tells me exactly how many um how many options I should trade based on my account size and here for this strategy I'm using a 500 000 account so this were eight options that I should trade tells me that I'm bringing in eight hundred and sixteen dollars um within uh what with within the next few days so that's ninety one dollars per day including the weekends which yields to a 33 percent uh Ri annualized so I like this and all I need to do is right now switch over to my platform and uh enter the trade so as you can see this morning I found for example ABT so this is here a trade that I took this morning I'm also in LVS and I'm also in another trade right and as you can see the calculator tells me exactly what to do because going back to what does a

trading strategy do a trading strategy tells you what to trade when to enter and when to exit and this is what I'm seeing here at a glance because for me

Summary

it is super important to take the guesswork out of trading see I went through this super quick but right now we spent 20 minutes together make maybe even less maybe it's only 14 minutes and during these 14 minutes 15 minutes who knows I've been able to show you how I place my trades because the biggest challenges for Traders the biggest challenge for me in the beginning of my

trading career was what am I supposed to trade when am I supposed to enter and number three when do I exit as I get in there and this is where this tool makes it super easy for me so that's where we go back to what I said the three pillars of a successful Trader are you need to have a powerful strategy no doubt about that

and you need to have powerful tools honestly I would not be able to do what I do I would not be able to trade for a living without the tool because it would be too much work and it would be easy

for me to get overwhelmed don't know about you but in the beginning of my trading career it was super easy for me to get overwhelmed so this is where for me it is important to have a tool that tells me exactly what to do in order to generate these SRC profits so just to be

clear this tool is not to find the next gme GameStop that is going from I don't know forty dollars to eight hundred dollars or something like this that's not what this tool does it shows me

trades that I can take every single day and that for me is the most important one because as you can see with this tool it is easy to really you use my time in the most efficient way and only spend 30 minutes on my trading every day so that I can enjoy the rest of the day because you might actually still be busy you might maybe have a job maybe you

love doing some sports or playing golf or maybe you like chasing kids or grandkids right so your life is busy you don't want to be a slave to your monitor all day long and neither do I so this is

why I want to do this in a super efficient way as quickly as possible and

then set it and forget it because the same as for the power x Optimizer I knew exactly when to take profits I also have this here so when should I exit the trades it says it right here so this is where super easy what to trade when to enter when to exit so this is the tool the power x Optimizer that I use every day my trading and it is getting more powerful every week because uh we're releasing new versions every week because I have new requirements sometimes I have great ideas where I say you know what and I would like to have this as an example right now the next requirement that I have for the tool that my team is working on is as soon as I identify a trade I just have a little button here and this button say place the trade and this way it's automatically placed with my broker and I don't have to worry about this you see people always ask is it possible to automate Trading I don't believe it is but this is computer assisted trading I said in the beginning you don't need to be the smartest Trader in the world I'm not the smartest Trader in the world I'm not all I need is I need to be better than a Trader who is taking the other side of my trade so and with these days lots of Traders are entering the markets who don't know what they're doing what do you think if this tool giving me an unfair Edge in the market I believe it does do you think that for me it is easier to make money with this tool than it is without the tool for sure I don't even know if I could do what I'm doing right right for sure it would take me much much longer and I'm pretty sure that I would make more mistakes anyhow so my trading routine is actually super easy super simple at 8 15 in the morning I run the scanner and look for Power X traits that I would then place at 8 30 this is when for me the Market's open so the markets are open and then for the next 15 minutes from 8 30 until 8 45 I am looking for opportunities according to the wheel strategy so love trading two strategies super efficient I guess that is the German in me because yes the accent that you're hearing it is German I came to the United States in Germany uh from Germany in 2002 with a dream to become a professional trader and in the beginning it wasn't easy because I didn't have the right tools I didn't have the right mindset but that's a different story and now it's working out as you have seen right now I'm generating on average 17 000 a month my goal is to make at least fifteen thousand dollars a month it covers my living expenses your living expenses might be different your account size might be different and this is why these two strategies are so powerful maybe your account size is not big enough for the wheel strategy that is okay in this case trade the power x strategy apply money management to build your account to grow your account from a small one into a larger one you see the cool thing is it doesn't matter whether you like to trade stocks or options see this morning instead of taking the spwr stock which I did I could have traded options I could have bought a call that expires in July has 49 days to expiration and as you can see the tool is making it super easy for me to really pick the right tray uh pick the right option here tells me how many

contracts the strike price how much should I pay on Mac as a maximum for this trade and then all I need to do is place it on my platform and again in just a few weeks we will have a little button here that says trade and you push this button and then it will send it automatically to my broker my preferred broker here and I just have to confirm it because every broker asks you to confirm the trade you know it when you place it and this way it is done super easy super simple okay so I I hope that this was helpful and if you would like to get this software there's probably a link right underneath this video uh where you can learn more about the software and get it into your hands and here's the cool thing you see I don't want you to make a decision right now whether this software is for you or not and this is why I'm giving you a 90 day money back guarantee yes I want you to get the software now I want you to try this software for the next 90 days and if it doesn't dramatically improve your trading if it doesn't generate winning trades for you you that you make back the investment in the software in a matter of weeks then just let me know and I'll be happy to to refund you the money because I want to make sure that this software is making you money it is making me money and this is what I've been showing you here in this video and if you go to my YouTube channel you will see that I'm regularly giving account updates about the trades that I do and how much money I make so if there's something that you're interested in there's probably a link right here uh underneath this video or somewhere on this site or maybe above this video who knows where we can place links or buttons and uh just click on this one and get this software today and start using it tomorrow all right now um I appreciate you being here so this is where I want to answer all of the questions that you might have around trading so I see that there's a a lot of questions coming in here again I hope that you're enjoying this I know that many of you already have the software uh if you already have the software just type it in the chat or maybe leave a comment and let me know if this is helping you in your trading and if it's helped you to make money with trading because this is something that I struggled with in the beginning to make money with trading I mean in the beginning I lost money and if the power x Optimizer or any of these strategies have helped you to make money just let me know okay so good to see everybody

Deep Dive Q&A

here um oh my gosh Jim year to date Jim is beating me by a few thousand dollars I'm at 85 000 Jim is already at ninety thousand dollars Jim is this a friendly competition so at some point we might have to settle it and the one uh the one Trader who made more money has to buy the other one a beer or do we do it the

other way around uh that the loser buys the winner a beer anyhow I'll be happy to buy you a beer or a beverage of your choice I said I'm German so therefore I like my beers we can also have a coffee or tea okay good uh Jason says what do you think about checking assigned positions to see if the pxo strategy has triggered prices for calls to buy now I like to keep these completely separate in fact I'm even trading them in separate accounts because I do not like to mix and match it it's a great idea not for me personally if it helps you right but you see these are two completely different strategies the wheel strategy is rather short term so for the next I want to say two to eight days why the power x strategy is more towards the next 8 to 20 days so different outlook here hey William so good to see you first time to be live here okay awesome good yeah Jim is uh is killing it with the wheel uh Jason says I'm only everything four thousand dollars a month only really trust me there is Traders watching this video right now who would kill for making four thousand dollars a month trust me on this one Jason you're doing good you're doing good okay um so it's Marcus late now I'm just here I'm here uh so just hanging out with you perfect um so any chance you get in touch with me somehow I the best way is contact my team I let's see let's see uh contact the team and then we'll see if we can chat uh just call or text 512-337-1885 or send an email to support trading rockwelltrading.com so uh just let them know what what do you need how can we help okay anyhow good so let's go back to let's get rid of this Teresa started with a hundred thousand two hundred thousand dollars with margin uh added fifty six thousand dollars in non-margin account months later I know you're killing it as well that's fantastic cool so um let's see what other questions do we have um why did you select XP uh Claire I didn't I I rolled it out this is where I said you know what uh no that is not for me so sorry for the misunderstanding I ruled it out uh the three that looked decent today uh just going back to the scanner uh were c-a-l-x DQ and SP uh spwr and again based on what I saw I decided to take the spwr trade mainly because I'm already oops that's not where I wanted to push there we go uh mainly because I already had five positions in my account so I just wanted to add one and this is why I decided on spvr oh well look at this SPC that I added yesterday that's doing pretty well can't complain here at all um good good good so uh Josh must have missed your update on your right position uh you get out with a profit not yet not yet this is in a different account still working on this one so still down on the right position uh but I did take what did I take today what did I say uh ABT ABT as a trade and this was working out or is working out thus far really really nicely okay uh so ride still down because uh would like okay Adam would like to see that account sure we can take care of that for you no problem uh let me just switch it around so logging into this account

there we go uh Adam this is this account so ABT looked much better earlier right now I don't know did it lose ah dollar I have a strike price here of 115 so this should be just fine expiring tomorrow uh there's my LVS trade that's doing well on LVS so I made some some good money on LVS thus far this year yeah look at this I already made two thousand three hundred dollars one thousand seven hundred unrealized so it seems that we're getting close to four thousand dollars here on on LVS and then yes right I have it boxed in but uh still down made eleven thousand dollars today but still overall down on this one and if you look at all of the trades that I took uh so there's one losing trade thus far but this only unrealized p l and unrealized P L changes all the time as we know I mean today it changed my a factor of what 12 000 or something like this it's just crazy okay anyhow uh Adam does this help cool all right Jennifer is asking how much for the Mastermind uh just uh text or call Lisa different number 512-858-8523 or send her an email at Lisa.rockwelltrading.com and uh she'll talk to you to see whether it makes sense for you uh or not right I mean it's not a good fit for everybody but uh maybe it's a good fit for you Jennifer so just contact her okay so Joseph uh currently the advice not to take any short trades Mark and I mainly Mark uh tested this strategy over a little bit more than 700 000 trades 700 000 trades and we found that long trades are all performing short trades so uh this was tested back over the past two years so it included the covet drop and it also included the drop that we had in 2019 so uh there's two actually pretty big drops in there and yet it seems that overall long trades have been outperforming the short ones okay so uh would you trade spcn plug with the wheel option strategy no I would not again Giacomo two completely different strategies this is why we have two different tabs don't mix and match I don't mix and match I mean this is a absolute uh for me it's a No-No so for you let's see what works best but I recommend not doing it okay um AP Blue Boy uh Mastermind this is where I trade live with my Mastermind members in the morning so this is where I'm usually spending a little bit longer in front of the computer so I'm usually we Trader together for what I want to say 45 minutes to 60 Minutes lots of fun here's where you can get more information AP blue boy if you're interested in this okay cool my gosh Peter made twenty one thousand dollars thus far I I hope that you're happy and that you're making cartwheels talking about Wheels right because this is awesome I mean really there's so many just the mere fact Peter that you're making money is amazing because you know most Traders lose money it is said that 90 of Traders lose 90 of their money in the first 90 days of trading well that happened to me in the beginning I don't know if this true it's it's a rumor that is going around but if you're making money you're way ahead making twenties one thousand

dollars trust me there's many traders who are watching this right now and say mine I I wish I would be like Peter

trust me on this one anyhow good uh so for pxs if there's a gapping down do you take the trade or not no I want to make sure this is why I see my entry price and it needs to go through my entry price so I like to place a stop order at my entry price based on the bid ask sometimes I like to use a stop limit order right so I want to make sure that this trade really has momentum because the power x strategy is a trend following strategy okay

cool um those of us have never been assigned a stock using the wheel I've been using it from the beginning you see this is why it pays to be conservative with the wheel if you're getting too greedy it'll hurt you you know I told you the right trade I took the right trade when I was bored when I was stuck in Florida after my kids had a sailing Regatta uh we were still in Florida uh in my RV and we had this snowmageddon hitting Austin so I couldn't go back to Austin it was too dangerous to drive and so I stayed in Florida was bored and took the trade and uh yeah wasn't the best one anyhow so uh Lisa how can I own the two programs that you use I just use mainly the one it's the power x Optimizer but it is for both um for both strategies the power x strategy and the wheel strategy Lisa I'll put it or my team is probably putting a link in there right now

because currently we are running a special and what is included in this special forgot to tell you is that when you take advantage of this special right now we will trade live together next Friday now if you're an existing customer who already have has power x Optimizer you're invited anyhow for free because that's my commitment to you if you invested in the software and when you did it and uh it was a really smart investment I want to make sure that I over deliver so next Friday we'll send you an email we are doing a class together we will trade live probably for an hour an hour hour and a half in the morning and we'll trade both the power x strategy and the wheel strategy so you'll get an email and when you invest in the Parks Optimizer right now this will master class will be part of this okay

so Timothy uh when do you exit uh with the power x strategy on black bar or art for hitting a Target so I'm exiting three exits either when I hit the profit Target or when I hit the stop loss or number three when I see a black bar because a black bar means a change of Direction here okay Tyler's asking can you talk about the time frames on your chart uh I look only at Daily charts so that's a beautiful thing I use to day trade a lot when I was younger now I'm 51 years old and I'm getting too old for day trading that is for the youngsters I'll leave it to them it's very nerve-wracking um made some good money day trading but I must honestly say I'm making more money swing trading the way I'm trading now than I ever have with day trading so this is why I'm I like to trade swing

trade on daily charts Tyler is this helping okay
good Claire Ewing what was that saying I don't need to be smart just smarter than the trader on the other side right
because you know that trading is kind of a zero-sum game right I mean if if you go long you want to be right so the
stock needs to go up and somebody else is selling to you so they have a different Outlook and as long as you're
smarter than that Trader you're good good so AJ is asking direct placing uh from
power x worth with any Brokers interactive brokers or trade station um the first round in the first round we
will implement the broker that I will use going forward uh go to rockwelltrading.com broker to find more
out more about it this or I did a video I'll link to it in the description of why we chose this broker and then um as
a second step our plan is to integrate interactive brokers so this will be in
the first run the first two Brokers uh we shall see okay
good uh let's see uh Lin will the trade button go to any preferred broker again
in the beginning it will be the one that uh I will have where I will have my accounts uh it's called trade here again
if you go to rockwelltrading.com broker there's more information there's also a special deal or I'll link to a video
where you can find out more I'll keep you posted as we are getting closer to releasing this okay
good what else uh so David says will you be able to automatically make the wheel opt-in trade from the calculator yes
David that is the idea good to see you here good to see you okay so uh Sandra
all right Sandra is is this you who is in The Mastermind I know that you have
invested in the software and now you're part of the Mastermind group so excited for you uh to to be here and yes it is
awesome Patty good to see you here that's amazing there's Dion Dion from uh
Switzerland also part of the Mastermind you've been using uh what the power x uh Optimizer for a couple of years now and
I know that right now throughout the day you're really busy with your new Ventures and uh we haven't talked in a
while we need to catch up again anyhow Edgar says yeah power x Optimizer already paid for itself and it's making
me money that is good that's exactly what it's supposed to do so uh crazy
Latino is asking for options what are why are the DTE so far out when you're
buying options when you're buying options you need to avoid time decay in time Decay is kicking in in the last 30
days this is when time is working against you so as you go further out you
don't have the problem of time Decay so you want to make sure that this trade really pans out so this is for the power
x strategy for the wheel strategy you're using way shorter term options because here you're an option seller and this is
where you want to uh you want to take advantage of time Decay but crazy Latino
is this helping good Leonard so good to see you

fantastic Claire I know we we have met Claire and I met at the money show in Florida uh by the way I will be speaking at the money show in Orlando in June so this is where I'll talk more about both strategies uh the wheel strategy and the power x strategy so I have two talks

there uh if you are in Florida and if you happen to attend the money show in Orlando just look up the program uh come to any of these presentations and say hi would love to meet you in person okay cool Jim likes this bed we don't lose I can buy you a beer all right you buy me one I buy you one we got it okay Daniel said yep it will be awesome to have a trade button it is coming very very soon the team is already working on this but as you can imagine this is where we spend weeks and weeks testing this because we want to make sure that we are sending the right trades can you just imagine so anyhow less is more started using the software a month ago started slow and building confidence and you are up already six thousand dollars this is awesome I love it I love it love it love it God so good to see you here uh fantastic software must recommend for anyone uh there's uh Duncan Dave made eighteen hundred dollars in one week trading the wheel that is amazing congratulations I'm loving it loving it Don so good to see you here I know that you're very active in our private Community I see all your posts uh trust me here's the deal uh for those of you who are in our private Community trust me I'm reading every single post I might not always respond to it because then I would be really busy for hours every day but I see how supportive this private Community is uh so everybody who is new to trading and joins and becomes a new member of the community there are experienced traders who have been using it I mean you see the successes here who will be happy to help you out and show you the ropes and uh yeah sometimes I'm jumping in and all I need to say is basically hey what these guys said because they already got it anyhow good good good Todd 6 500 per month this is so good Todd and I also go back uh quite a while right Todd when did we meet two or three years ago it has been a while okay anyhow um so Clements is asking how long should you stay in a trade if my trade don't get to the Target that the program will say until you see a black bar otherwise stay in there as long as you still see green bars and it's going up hang in there see arwr for example it's one of the traits that is not yet taking off let's just uh go back to this uh and let me let me just show you here really quick so you see arwr is a trade that is not yet taking off but all of the bars are still green and sometimes as you can see here sometimes it takes a moment before it takes off so as long as you don't see a black bar just apply a profit Target and apply your stop loss and if your stop loss and profit Target is not hit just hang in there so uh what was it arwr was one of the traits that

have not been taking off yet uh let me just take a look at the other one I believe the other one that has not yet taken off yet is uh no everything else has taken off um I can just show you here so plug is another trade that I mean this has taken off clh this has taken off obviously SPC taking off uh staa uh this is a trade that I'm in taking off you see most of the trades take off right away not every single trade will though anyhow good uh so James does this help okay cool uh Sama Sama we also uh when did we meet first time wasn't it like a year back haven't you invested in the software like a year ago and on average you're making eight thousand dollars I believe that's per month that is just amazing there it is yeah a month okay done also on target for at least 30 percent a year that is amazing hey there's MH yes uh by the way I'm spelled with a K I'm German Marcus with a K so MH Asset Management thanks great strategies glad that you're enjoying it oh my gosh Tony has made over 90 000 since January you're like Jim you're beating me and they see this nothing gives me Greater Joy uh then uh yeah seeing how you're making even more money than I do that's fantastic that is just awesome okay now uh as you can see if you don't have the software yet and you're seeing all the success stories I believe it's time for you to invest this software so we'll leave a link right underneath the video or on the left hand side and again you don't have to decide now whether this for you or not get the software try it out see how it helps you in your trading and if it doesn't do everything that I tell you if I'm not over delivering uh with the education with the software with the tips and tricks out of the community that you're getting just let me know within 90 days I'm that confident that this software will help you that confident that I'm giving you a 90-day money-back guarantee really just just try it out try it out if after 90 days you're not making money with it I'll be happy to to refund you every single cent of your investment but I'm that confident that it will help you to make money to take your trading to the next level or if you have been losing thus far to turn your trading around because you have seen the success stories here success story after success story how this software is helping other traders to make money so invested right now Link in the description or underneath the video or here somewhere on this side or on this side or on this side who knows maybe we should Place buttons all the way around anyhow have a great rest of your day and I will see you very soon take care
