

all right welcome to coffee with marcus in today's show we will talk about what is happening in the markets today now this will only take us two minutes and then we will talk about the death cross and the golden cross

since everybody is talking about these so we'll talk about what is a death cross and a golden cross we'll talk about why is suddenly everybody talking about them i'll show you a simple trading strategy using the death cross and the golden cross and i'll show you how to use this strategy in your trading and you'll see it's very very simple now next we will talk about my current trades now as you

know right now i'm assigned in six stocks with the wheel so we'll take a look how that is going and i'll show you the power x trades that i have going on right now and after this i will answer your questions so right now put them in the chat and i'll answer as many as i can later in the show now as you can see

we have a full program so let's get started this show is about real money and real trades i'll show you the trading strategies that i personally trade the tools that i use to trade my own accounts and we will talk about the right mindset of a trader now

talking about mindset i'm going to show you how to create src profits and src stands for systematic repeatable and consistent because that is the key to long-term success in the market so if you are sick of all the hype and empty promises and you want to learn trading strategies

actually work then click on like right now and let's get started all right fantastic so we have a full show because really the main topic will be of course what is a death cross and what

is a golden cross and how can you use it in your trading but right now let's just focus on what is happening in the markets again

What's Happening In The Markets

it'll just take us two minutes because today it's another day of up up

and away here we're looking at the dow jones and the dow jones right now up 320 points another percent

tagging on today so moving higher but you see the stars of today's show are the s p

500 and the s p 500 only up 0.5 but why do i say that they are the stars

of the show today because we have a new all time high we are abbreviating this right

now with 88 the new all-time high in the smp and also in the nasdaq so

right now the nasdaq uh it's lagging actually it's only about point five four percent five three percent so out of the three

indices it is the uh the weakest one but also

making new all-time highs anyhow so this is what's going on

is there anything that can keep this market down i mean it's it's unbelievable it is just

up up and away all right let me just quickly prepare something here on my chart because today we want to talk about the death cross and what that is

okay so the death cross explained here's how to use it in your trading i want to talk about

What Is A Death Cross & Golden Cross

two terms that technical traders use all the time and that is death cross and golden cross so right now in the next few minutes you'll learn what is a death cross and a golden cross you'll learn of why suddenly everybody is talking about them i will show you a very simple trading strategy that

you can use using the death cross and the golden cross and of course i will also show you how to use this in your trading and you'll see it's super simple so we dive right in golden cross versus death cross what is the difference let's start with the death cross and it's actually very very simple because a death cross occurs when a short-term moving average crosses a larger moving average and i brought up the smp here right now and i also brought up two moving averages

because the most popular moving averages used for the death cross in the golden cross are the red line which is a 200-day

moving average and the blue line which is a 50 day moving average

simple moving average so nothing really spectacular there now here is what a death cross is a death cross happens when the 50-day moving average crosses the 200-day moving average from above so you see this here on the smp this actually happened on december 7th

2018 right here and as you can see after this the markets kept plummeting down so the markets after the death cross occurred uh plummeted another 10 a little bit

more actually 11 here so this is why the death cross is a bearish signal that is supposed to predict short-term weakness in the markets okay so now that you know that death cross is

let's move on to a golden cross now as you can probably guess i want to use this example here so as you can guess the golden cross is a bullish indicator that occurs when the short-term moving average uh crosses over a longer-term moving average and again we're using here

the 50-day moving average it's supposed to say 50-day and the 200

day moving average now here is an example of the golden cross that occurred on july 8 2020

so almost a year ago and as you can see it's a bullish signal because after the golden cross occurred the stock market rallied more than 33 percent and it is not over yet but so so why is right now suddenly everybody talking about a death

cross well because the death cross has been making headlines because it just occurred on bitcoin a few days

ago so as you can see here bitcoin uh let's actually zoom out a little bit so

that we have the whole picture here actually let's zoom in for a moment so that you see

when it occurred it just happened so it just happened uh on actually june

19th and today is june 24th so why is the bitcoin death cross such

a big deal well this is where we want to zoom out to see when did the golden cross occur and if we go back then we see that the golden cross occurred right here and this was in may

2020 so since then as you know bitcoin had the tremendous run from 9 000 to over 64 000 i mean this is crazy and

now when we have the death cross it means that this tremendous run here could actually be over so uh let's actually talk about as you can see you can use this as a

How To Use Them In Your Trading Strategy

very very simple strategy uh how can you use it in your trading so super super simple

just gonna zoom out a little bit more and this is the simple strategy you simply buy

whenever you see a golden cross okay so this means that

the 50-day moving average crosses the 200-day moving average from below and then you would sell

whenever you see a death cross and these are the nicknames for them but everybody refers to them this way so as you can see it is a very simple trend following strategy but let's

actually take a look at this and see how accurate is this trading strategy
well let's find out so here's the deal uh what i did using trading view right here
i actually programmed it into trading views so that we can easily back test the strategy so let's
take a
look at the performance for bitcoin and uh by doing this
i'm just going here to the strategy tester and uh just want to adjust something
really quick in the settings so i'm assuming that i'm just taking a 10
000 position here when trading this strategy now as you can see
over the past 10 years there were 13 trades let me actually uh zoom in so that you
can see this so i want to just take a quick screenshot here and then you can right here we have the
trade so as you can see we had 13 trades we still have one open trade out of these 13 trades we
had six
winning trades seven losing trade so this means that the winning percentage is 46.15
so that's not good but here is the good news the good news is that the winning trades are much
bigger
than the losing trades now more good news let's actually zoom in again here
let me just move this a little bit higher if i can let me just move this pane there we go
this way it's easier to show so let's zoom in and more good news here
this strategy the total net profit as you can see would have been 1.168
million dollars based on a 10 000 account holy moly that's an
11 000 return i mean that is just crazy
so do we have a winner here is this just a great strategy that you should do because could this be
the simplest and most powerful strategy for trader well not quite not quite because
take a look at this so if you would have just bought 10 000 of bitcoin 10 years ago here
we see the buy and hold return so if you did the 10 000 and just held it without trading it
then he would have made what 72 million dollars whoa
right i mean this is kind of crazy so wait a minute if you would just have
bought bitcoin and held it you would have made 70 million versus only this measly
1.1 million dollars so so maybe this strategy isn't that good oh oh or maybe
bitcoin is just an exception because i mean come on let's think about it bitcoin has been going up
like crazy so
let's actually test it on a few more stock and see how it performs and first of all let's actually take
a look
at the spy so the spy is mirroring the smp so this should give
us a little bit more accurate data right because we also have more data here for the spy
so we can go back to 1994 and that is 27
years of data so let's actually see what results we would have achieved if
we had traded this strategy on the spy let's switch over to our handy-dandy ipad
let's zoom in and let's take a look at the trades so here we have our trades and since we
are looking back over the past 27 years we would have had 25 trades out of these 25 trades
uh 12 of them were winning trades then we had 13 losing trade so
48 winning percentage now uh as you can see very similar to the winning percentage
when trading bitcoin you also see that the average winning trade is much bigger than the losing
trade and uh let's see
how this would have turned out if we had also here now here's what i'm going to
do for this one i just want to say we start with 10 000 and we are just reinvesting 100 of our

equity shall we do this i mean this makes it super easy so let's take a look at the performance here and see

how we would have done here so if we had traded this strategy on the spy which is an etf mirroring the s p we would have turned 10 000 into 35 000 okay that's 356 percent over 27 years not bad so that's around uh 13 per year and you see some people would be very happy with these 13 per year but you see for me that's not very impressive at all because i usually make 60 to 80 per year with

my trading strategies but let's compare this to buy and hold so if we invested um 10 000 in 1994 27 years ago in the sp y and didn't do anything oh my gosh look at this it would be worth 85 000 well it's 85 857

or 31 per year ooh this much better well as you can see so

a simple buy and hold approach would have outperformed this trading strategy by a factor of more than two so

maybe maybe we need to find a stock that is more range bound for the strategy right because as you know uh both bitcoin and also the s p they've just gone up over the past 20 years so let's actually see if we find a stock that is a little bit more range bound so let's do this why don't we go with what would be a range bond stock probably ibm let's take a look at ibm let's take a look at the weekly chart for ibm and let's actually zoom out a little bit

so that we see what ibm has done over the past uh i don't know can probably for ibm get much much more

data so as you can see as we are going back to 1974. let's do that

uh let's just go back for uh i don't know between 1973 as you can see here and uh and what 1997 so ibm was trading anywhere between ten and forty dollars and uh after this if you look at ibm it has

been trading in a range uh here we see another range so it's definitely more range bound here right so it has been

trading between what seventy dollars and a hundred forty dollars and recently it has been all over the place so maybe

maybe ibm is a much better candidate for this strategy shall we see

okay so let's take a look of what happened if we bring up here the strategy tester

because as you can see ibm has been all over the place and uh here we can actually go back until 1994.

what i need to do is i need to switch back to a daily chart because this way we are getting accurate results okay so

let's take a look of what happened here and we are zooming in to make it easy for you so going back to 1974 overall that is 47

years and over these 47 years there were 93 trades and now out of these 93 trades

we had uh only 24 winning trades 69 losing trends oh i don't look good at

all right i mean this gives us a winning percentage of only 25 so much less than in trending markets so

thus far this doesn't look good but uh let's just take a look at the performance report since we are already here might as well so let's do this let's zoom into the performance report oh

what the heck if we had started in 1974 with 10

000 and followed this trading strategy we actually would have lost 9524

and with the simple buy and hold uh approach we would have turned our ten thousand dollars into as you can see here almost eighty thousand dollars so let's talk about this how accurate is this death cross because i mean right now everybody is freaking out that it is appearing in bitcoin but as you can see from this example paying attention to the death cross is as useless as bringing an accordion player on a deer hunt or as useless as screen doors on a submarine so both the death cross and the golden cross are appearing way too late to be useful let me just show you another example here we want to go back again to the s p 500 so i'm going back to the spx here right now let me switch over to the chart and let's actually take a look at last year when we had uh the covet drop so here we go so uh this is when we had the last occurrence of the death cross and doesn't it look very similar to what's happening in bitcoin right now so right here is the death cross and this appeared on march 30th march 30th 2020. now you get the idea okay now when the death cross finally occurred and let me draw a line it's right here so when the death cross finally occurred the down move was already over the stock market was on its way to its recovery so is technical analysis useless no not at all because i want to show you something that does work when using technical analysis now as you know i am trading the power x strategy which is based on three indicators and the three indicators is what you see down here number one uh which is the rsi number two it is the stochastics and number three this here is uh is the macd and it is working really really well for me let me just show you my trading account here for a moment so that you see of what is happening with this strategy so here we go there's the trading account and as you can see i made 3 472 dollars in profits on a small 20 000 account and this happened in less than 17 weeks now this is more than 17 in two months now if i could keep that up then that would be 102 in a year much better than a buy and hold approach or the this death cross golden cross stuff that everybody is talking about this right now now usually i mean the last two months have been really good this is why i'm up so much uh usually i said i'm shooting more for 60 to 80 but hey if you would like to learn more about this strategy i've written a book about this so the power x strategy i'll link to it in the description or what i also do i did some videos about it and i will link to videos right now and if you click on it i will explain the exact rules of the strategies in these videos it is super simple and you're going to love it so click on these videos if you want and i will see you over there okay don't go anywhere just yet because as you know this is part of the life so we're cutting this out to have it as standalone video if somebody ever wants to look up what death cross and golden croth is okay so we already talked about what is

happening in the market we talked about the death cross and the golden cross so next on the agenda here is my current trades and after this

we'll talk about what is happening so uh let's just see let's just get rid of this

and uh let's see so uh you know what since we are already there we might as well talk about My Current Trades

the um the power x trades that i have in my account right now so

let's just move over to the account and the trade that i entered that came up on the powerx

optimizer just a couple of days ago was uh or is zg the zillow group so as you can see

right now on a 20 000 account up 282 dollars so not bad at all just want to show you

what i saw here on the chart so if we switch over here to power x optimizer which is the software that i

use oh by the way before i forget uh before i forget we do have a special on the powerx optimizer um

coming up this afternoon we start this afternoon through sunday and i'll give you a link in a little bit

here just want to show you so um zg popped up here on the scanner

and again what i'm doing is that i'm looking at a really nice p l chart and this is what i saw

here with zg i'm trying to zoom out it's definitely easier on a computer than using my

two fingers but what i was looking for is nicely going up and i see it here on the

p l charts so this is where we had the signal to go long at 116 25

and uh right now currently in the market as you can see it is uh at 121 dollars so it's already up more than five dollars that's so bad at all right i mean what do you think about

this so uh also looking at the trades that we have done thus far you see us not every trade is a winning trade with the parex strategy some trades are losing trades but take a look at this take a look at the losing

trades 158 473 410 125 403

5. 179 174 and i'll take a look at the winning trades let me just sort it here one thousand

six hundred dollars this year's another one that i just closed earlier this week one thousand five hundred dollars

spc almost a thousand dollars cell h almost a thousand dollars and there is a key see that is the key

to src profits strategic repeatable and consistent the the key here is that you keep your losses small as you can see and the winners are much bigger than your losses because look at

this we're probably at around what uh 50 50 one two three four five six seven trades

or winning trades that's actually a scratch trade this is also a scratch trade so let's say these are all scratch trades here and then we have one two

three four five six seven losing trades so this basically means it's only a winning

percentage of 50 so i'm wrong half of the time but since i know when to exit

turned out really really good again these are the trades over the last couple of months uh i believe i did that in the beginning

of may i started with this uh maybe late april so don't hold me to this maybe it's a

little bit over two months but hey i'm well on my way on this super small account and i'm trading it on a small

account because i want to show you that you can trade it on a small account so as you can see up nicely here a couple of

months uh 3 000 thousand five hundred dollars here looking at the unrealized profits which

you should never do because they can disappear quickly there's another almost three hundred dollars so this would bring it up to around uh what um three thousand eight dollars but again don't pay attention to unrealized loss profits or losses because they can change all the time this year the realized profit and loss is important okay cool um is this helping you out

now i also want to show you the traits that i have according to the wheel strategy and if you're interested in the wheel strategy written a book you can have it for four dollars and 95 cents link in the description so uh let's actually switch over to that

account really quick i want to do that to show you the positions actually you know what let's uh start with the results thus far so this year different account so here on this account i put 250 000 in there so in a bit larger account i have it as a margin account five hundred thousand dollars in buying power

and thus far my realized gain is around a hundred thousand dollars a little bit over a hundred thousand dollars so i'm already in the 100k club generated a hundred thousand dollars in profits through trading so let's take a look at the positions that i have here right now and these are my six positions

now this is where in the previous coffee with marcus i said oh my gosh i will get assigned in possibly six positions and here's what my reaction was to this dpia okay so let's take a look at the ipad and let's actually see what is happening with these positions and i want to start with aa and cw8 so aaa i got assigned at 35 i sold calls because um let's just quickly talk about this when trading the wheel strategies there's three steps to this step number

one you're selling puts and you're collecting premium number two you might or might not get assigned the stock when you do number three you sell calls and you collect premium so this is the wheel strategy and again what i'll do is uh towards the end of the video i'll link to another video that explaining it in detail or if you prefer to read over watching videos uh get the book it's a good book why do i know there is a good book i've written it so very biased anyhow so uh let's take a look at this and let's see what is happening here so i did sell um the calls so here i'm in step number

two selling calls since i did get assigned here uh sold 29 calls for 20 cents so i'm making 580 on the options here and if aaa stays above 35 by friday then i would make an additional um

no this that's it that's all that's all i can make on aa so we're good there aa right now is trading you see it in the top row here at 36.33 so it seems that i'll just pocket 580 let's talk about the next one the next one here is camping world camping world i got assigned at 37.50 i sold the 39 so i sold a strike price that is higher than the price that i got assigned i got two thousand one hundred and sixty dollars uh in premium on selling the calls and if camping world stays above 37 or 39 if it stays above 39 i'm making an

additional four thousand fifty dollars from the stock so this would mean that i'm looking at six thousand two hundred and ten dollars by the end of the week if if camping world stays above 39 let's see right now camping world today and today is thursday so we have one more day but today it is trading at 39.44 so if this continues good this will give me here 6210. not bad at all not bad at all i'll take this so let's see what else do we have here we'll talk about right in a moment but i also want to talk about jwn and pen because these are two other stocks that i have for jwn right here got assigned at 3250 i sold the 3350 so i made 1178 on premium on the calls and if um the stock stays above 33.50 i'll make an additional 3 100 on the stock for a total of four thousand two hundred and seventy eight dollars okay not bad at all let's see where we are right now we have to stay above 33.50 by tomorrow and right now jwn is trading at 36.06 so we are 56 cents above if this continues tomorrow it will look good and i will make some additional money on the stock okay um then we do have pen and pen i got assigned at 73.50 i sold the 76 call so i made 12 87 on this one if penn state's above 76 by tomorrow evening then i'll make an additional 3 250 on the stock so this would give a total of 4 680 let's see it needs to stay above 76 right now it is at 76.44 you see the second to last year so on these four positions not bad at all i do believe that we added it all up in the previous coffee with marcus and if all of them are staying above the strike price this means that i would make somewhere around fifteen thousand dollars a little bit over fifteen thousand dollars just this week alone so anyhow uh there's two other positions and this is lvs um and i just wanna show you what happened here so with lvs i got assigned uh let's just move over here let's actually get rid of the these moving averages with the death cross and golden cross here and let's talk about lvs and in lvs i did get assigned at a strike price of 58. i'm just moving this over here hold on let's do this okay so i did get assigned here i sold already a bunch of calls so i collected premium but right now on the stock i'm down so on the stock i'm down a little bit over six bucks per stock oops this is where we go i did not share the ipad did not share it but uh here we go so 58 right now it's trading at 51 so i'm down around six dollars per share but i already collected premium for the calls and i collected premium when i sold the puts but here currently i'm down around ten thousand dollars but hey if i can make 15 000 in a week i'm not too concerned about this so as this pops higher i will be selling calls and i'll be just fine i'll be just fine the one where i'm probably um not doing fine is right so let's talk about right uh right is a stock that i have had for a while right now because what happened is that uh initially i sold i sold puts at a strike price of 21.50 got assigned there sold more puts i believe it was at 13 and then i sold more puts at 9 at this level so right now i have 10 000 shares at a strike price at a cost basis of 15.7 now it just closed at around 11 so as you can see

i'm down here uh what a little bit over 4.80 per share so this means on 10 000 shares around eight 48 dollars now here's the deal also with right i've been able to collect premiums so overall as you can see collected fifteen thousand dollars in premium and therefore i'm only down actually thirty two

thousand dollars today today i sold more calls on right i collected another thousand dollars in premium so that will increase this uh to sixteen thousand dollars here and also

as you can see lvs we collected five thousand dollars so right now the stocks are down ten thousand but net i'm only down five thousand dollars so that's not bad at all again keep in mind that this here is a 250 000 account 250 000 in cash 500 dollars in

buying power so this year is not bad at all okay so uh what we have done thus far we took a quick look at the markets we talked about the death cross and the golden cross we also talked about my

current trade so now you know the pxs trades uh the ones according to the power x strategy that i've been taking

and you know the ones according to the wheel strategy so you know what is happening so what is left for us to do

in this show here probably my favorite part talking to you

and see what questions you might have for me okay so let's actually see it is uh

it is a beautiful thursday afternoon pretty hot here in austin texas i think

today we're scratching triple digits again yeah yeah yeah okay so adam says what

Deep Dive Q&A

makes you close a trade uh so buying it back for example or is letting spy worthless well

i'm looking at the premium per day and if i can buy it back with 90 of my max profits versus holding it

over a few more days i'll do this uh usually on the last day when it expires i'll just let it expire worthless here but if i can close it a few days early for 90 of the profits i will do that so good to see everybody

here so david says can we add to the wheel filter high price stocks uh that is higher than the 200 limit yes

this is coming up in the not the next the version after that of the powerx

optimizer so it will be there hey before we continue with the questions is this helpful at all here because if it is do

me a favor and click on like and here's why i'm asking you to do this i see i have a little software that shows me the

ratio of likes to viewers right and when i see a video that has a lot of likes compared to the amount of

viewers that we have here then i know that oh this is a topic that you really like to see more of and i will do more

of the videos that you like and i do less of the videos that you don't like so if you like the videos today where

i'm right are going through my trades if this is helpful for you if you know a little bit more now about the golden cross and the death cross

your favorite click on like really quick while we uh while we continue answering your

questions so georgia says last week might have been the worst but i had my best week thanks to power x optimized that's the deal it must be the worst

week for the dow in eight months and what's the best week for you what's the best week for me yeah this is a

this is a cool thing this is why i believe that an active trader jordan like you and an actor trader like

me we can run circles around the buy and hold traders and again admitted this year the markets are doing great i mean we can just take a quick look at where we are year to date for the indices so if you would

have just had the dao and you bought this uh year to date we're up 12 on the dow not bad at all right but

here uh i'm up a hundred thousand dollars based on the 250 000

uh let's just quickly see so in percent 100 000 divided by 250 000. so that's

40 percent uh can you see this here that's 40 so overall the market is up 12 we are up

40 so that's not bad at all so the s p is up year to date 13 and the nasdaq is up eleven point five percent well pretty much like the dow so uh overall the indices are up twelve percent and this is where again i

believe that an active trader like you and i we can run circles around buy and hold

okay anyhow um good good good so death cross isn't some metal band

from the 90s not quite sure it could be it could be anyhow

cool uh max thank you so much for your feedback really appreciate it uh so um now i eboot trd so what david is asking about we're filtering out stocks that are more than three hundred dollars by the way david

it's more than three hundred dollars uh so and right now you cannot change that filter

just yet okay uh to nicole stripper says i was assigned x looks like i buy back my calls and sell the stock for more

profit then let's just letting the calls expire really uh usually most of the time i mean here

i will let it expire um to nickel stripper have you already asked the mighty networks uh just

be very specific what where did you get assigned uh where did you sell the calls right i

just want to get a little bit more information you know that you have access to our private community here in mighty networks provide some more specific data

and then we can take a look at this and there's also very experienced traders from our mastermind who can help you out

with this all right very cool um max at t is range bound probably what is t it's a

t and t uh you know what why don't we do it uh max since you asked about this

want to see it i want to just quickly see what the death cross does ah you already know that it's not working so we

might not have to go there at all okay good good good uh so

onatski says have you considered rolling over you covered calls to make money on the stocks uh you know

what i like to keep it simple i like to keep it simple and you could do this if you want to keep rolling it

i'll look at it tomorrow and see if it makes sense but hey if i can make 15 000 in a week i'll

not complain don't be greedy here's the deal when you're greedy the markets will punish you if the markets this week say hey marcus would you like to have fifteen thousand dollars in a week which is

usually my monthly goal that's my monthly goal if they say uh we're going to give you your monthly

goal in a week i usually just say thank you very much be nice and polite
uh maybe i should say thank you sir or thank you ma'am because maybe the markets are female
who knows okay anyhow so i just say thank you and we get out of this so i don't
make it more complicated okay so amy says when you withdraw funds at the end of the month
for living expenses
that money is charged as ordinary income and not as capital gains i mean no it really depends
how you
structure it so uh please talk to a cpa to make sure that you know
exactly how it is taxed so i have set up my trading as an llc so by the way it's
called trade confident llc you can look it up it's a it's an llc here in texas
and this way it is actually capital gains anyhow talk to your cpa
i'm not a licensed professional can give you tax advice here okay uh so jack says how do you
decide
when to trade options or stocks on the power x optimizer we actually have a video in there and
we are yeah let's talk about this jack
we are doing a master class next friday we're doing a master class where we are
talking about this now if you already have power x optimizer you'll automatically be invited to
this
master class if you don't have power x optimizer just yet and if you're taking advantage of this
right now before sunday first of all you get a super heavy discount i mean i think that's a 35
discount or something like this that the team has decided that they want to offer it for and we
include this master class where we talk about this so the team will drop a link right here and we'll
post an author in the
description it is rockwelltrading.com master if you would like to have the software that helps me
to achieve these results that
you have seen right here okay so um jack i will see you on friday and we will go
through this in detail cool roll says will you create a video to update your plans
yes i will yes i will there's actually two things that are right now
in the works so let me just complete these two things and then i'll do an update video so it's
probably coming next month
uh thanks for reminding me okay cool and uh yeah jeff says some funds
are text differently again talk to a cpa they
they know best okay so jru and can we get the 50 and 200 day moving average in
power x not yet but give us uh six to eight weeks in six to eight weeks
we will have it there okay well in arizona it's 106 degrees why do you live
there i mean sometimes i'm asking myself why do i live here where it's triple digits
okay all right uh anita says can i hit like a thousand times uh so that you don't change
anything no but thanks for the feedback really appreciate it here okay james also uh said i had
my best
week since starting power x and the wheel that is so good uh and i know that you have james for
how long have you been using
the power x optimizer now has been a while right i mean it hasn't been a little bit over the year
didn't you take advantage of a
special that we ran last year if i remember correctly i'm quite sure okay
good um manuel uh says i've learned a lot since following me a quick question
tastyworks or interactive brokers honestly tradier if it is available in your country

if not interactive brokers so go to rockwelltrading.com broker to find out more about this michael is asking when are we going to mexico very very very soon trust me we're working on this okay so uh jake yeah

moving to trade here soon exactly what else do we have uh okay adam says

what is the m m uh it's either the mastermind or uh somebody might be

referring to mark and i it's mark and marcus mark is my head coach and

he's also the the head trainer here at rockwell trading uh he has been my first ever coaching student so has been with me for the past 16 years and we were just great friends and he is

just an amazing trader yeah so it's probably marcus and mark anyhow

good good good fantastic so uh jeff says from long-term microsoft in my account

so lots of buying power not lots a lot of cash don't want to sell microsoft so

should i just wheel strategy for this jeff what you could also do is you could just sell calls on microsoft

probably not too much premium in there so take a quick look at microsoft um and let's see what the implied

volatility is yeah you see it's only 24 18 so there's probably not much premium

in there i mean microsoft just became the the second company uh in the world that hit 2 trillion no in

the us uh the first was apple and the second is microsoft who now has a market cap of more than 2

trillion i mean there's a whole lot i think that you're doing pretty well with that so um

don't know what you mean how to adjust the wheel strategy for this if you own stocks you might consider just selling calls against it uh there's

nicole okay thanks for posting this link if you do want to take advantage of this special and spend a master class

together with uh mark and myself next friday we do this live when the market's open so we trade live together probably i'll go for an hour hour and a half just go to rockwelltrading.com

master so matthias is asking what indicators do you take in consideration when looking at stocks for

the wheel i just support i'm just looking at support levels no indicators whatsoever

okay good so uh i know that there's still a lot of text questions i actually did a video on this

it's called trading and taxes i believe that it's what's called i'll link to it in the description and maybe nicole can find it

and post it here in the chat it's trading in texas take a look at this i might answer some of your questions here

all right hey david uh bought parks optimizer this morning

glad to receive received the deal that you had just advertised yes so we started it this morning

so you got lucky but we haven't sent out the email just yet uh the team said hey you can announce it

first on coffee with marcus so you have heard it first here on coffee with marcus

okay and uh yeah james said started trading in december i thought that you had power x optimized

a little bit longer james anyhow hit my goal for august today and it is june it is june

i mean this is why it doesn't matter what the markets are doing that's a great thing it doesn't matter

what the markets are doing as a as a trader using the power x optimizer you know

how to take advantage of this okay cool cool cool all right eddie so good
to see you oh my gosh eddie eddie is part of the mastermind and you just had recently
such a tremendous success story so congratulations i'm so excited for you so excited for you
anyhow so what i will do uh right now is since we covered a lot of ground here right now
i'll link to two videos here um one is a playlist with the wheel strategy
and the other one with the power x strategy so if you want more information just click on these
videos uh take a
look at them now so this way you have a better idea or you can just get these books anyhow
since you're already here on youtube might as well keep watching these videos that are popping
up anyhow
have a great rest of your day and i'll see you in the next video take care
