

trading options for a living i'll show you how i made more than 52 000 in the past eight weeks and we'll walk through this step by step so this will be a great episode because it's a question that i get all the time is it possible to make a living trading and that's what i'm going to show you today let's get started this show is about real money and real trades i'll show you the trading strategies that i personally trade the tools that i use to trade my own accounts and we will talk about the right mindset of a trader now talking about mindset i'm going to show you how to create src profits and src stands for systematic repeatable and consistent because that is the key to long-term success in the market so if you are sick of all the hype and empty promises and you want to learn trading strategies actually work then click on like right now and let's get started all right fantastic let's get started so in this video i'm going to show you how i made 52 138 dollars in eight weeks by trading options and you might be thinking how the heck does anyone make that much money doing something so risky and you see the answer is simple you need number one a solid trading strategy which i will show you in this video you need the right tools and you need the right mindset so in this video i'll break down all the steps from how to trade like a pro where and how to find great trades how patience is extremely important when making money and more so let's jump right in and uh let's actually go on to uh the notes section here so that i can take some notes and yes if you want i'll make these notes available to you stay until the end of the show and i'll let you know exactly how to do this so the key question that i'm always asked is is trading for a living possible and for me this is a resounding yes so uh let's just uh first of all start a little bit high level and here is uh what you need

Here Is What You Need

and then we will dig in and uh dive deep into these different things so first of all number one what you need is a trading strategy and we will talk about the trading strategy that i personally use to make more than 50 000 in the past two months here and i'll show you how to do this step by step but you also need to have powerful tools and you will see why that is so important and i'll show you exactly the tools that i'm using and then of course we need to have the right mindset and i know that mindset is probably the most boring thing to talk about it so i will not spend a lot of time on this but i will share with you the important things that i feel you need to know if you want to trade for a living now there's one more thing that you need and this is money and i i kind of hate to break the news for you if you don't have any money you can put money into your account and you won't be able to make money and yes i made uh more than uh 52 000 and the key question that you need to ask at this point is how much money did you put into the account and this is on uh on a 250 000 account so 250 000 in cash which i put into a margin account so this gives me 500 000 in buying power so this is extremely important to know right how much did i make on what account and also in what time frame but uh so before we just talk about the

trading strategy uh let me just add a very very important disclaimer no no no these results are not typical yes i am very very good at this i've been doing it for a long time if you start trading this strategy or if you start trading these tools do not expect the same results right i mean this we will talk about it later it is super important that uh you will actually uh start on a simulator first anyhow so let's dive in because i promised you that i will show you the strategy that i use

The Wheel Strategy

to make these kind of returns and we'll go through this in detail now if you have been following me for a while this so this is the first

step having the right strategy and the strategy that i like to trade

right now is the wheel options trading strategy so um you might have heard me talk about

this i will uh put a link in the description to a playlist that i did around it but today

i also want to dig a little bit deeper and show you exactly what i'm doing here so

number one uh first of all what we are trying to do here is sell puts and collect premium

and so one of the questions is that uh okay when selling options so how long what is the

expiration and i like to actually go one to two weeks out so today is a friday

so i am right now willing to sell calls that are expiring next week the idea

here is to collect a weekly paycheck and i'm putting this in quotation marks because

see this were some people told you that you can collect weekly paychecks with no risk

and that is simply not true when trading there is risk and so i'll show you everything here on this

channel i'll show you my account right now and i show you exactly what stocks i traded and also what

stocks i have in my portfolio right now anyhow so this is the first and most important thing uh so what is the expiration here and the second thing is you want to make sure that you trade only the best stocks

and what do i mean by this well let me just uh show you uh the stocks that i traded in my account and here you see apple amd dropbox dks is dick sporting good

uh ewz is a i think a brazilian etf gtx js the gold miners halliburton

hasbro ibm jwn you see these are all super solid stocks these these are not

stocks that are fly by night right or you will not see any gme or amc

or blackberry or bad bath and beyond or any of these meme stocks here we're talking about super solid stocks

and also want to show you the stocks that i have in my portfolio right now so let's switch over

to the ipad so one of the stocks that i have here is gdxj and again we are selling puts

actually let's start with uh dks because this is a little bit easier here so dks uh it's dicks

sporting goods and i mean super solid retailer right you might have heard about them and the

idea here is that we are selling

puts at a strike price that is uh that that is at support

and this is where i looked here at uh some short-term support and i did a video on this on how to find

the short-term support but basically you want to see at what price level did

uh prices touch uh several times and then bounce back and as you can see

here it is the 66 level so i sold a 66 strike and if we are staying above then i keep

the premium if we are going below in this case we would get a sign now another stock that i am trading

right now is snap snapchat and here we're looking at a strike price of 49 and again

this is where you want to pick super solid companies now snapchat i don't know about you do you have kids

i mean my kids they live on snapchat i mean they're not on facebook they're not on twitter they're barely on instagram but they're on snapchat so i believe it is a super solid company

uh we see that we had support several times one two three four times

almost here a fifth time so this is where i sold a strike price at 49. so let's go

back here and i'll show you more examples in just a moment but you want to make sure that you're only trading the best stocks

and that you always look for support and the support that i like to

see is a support level at least over the past eight weeks

okay a support level that held at least over the past eight weeks let's go back here so let's take a look at this right now

as we are recording this video uh it is march 12th and uh this is where i'm going back as you can see to what uh around december 12th so this year is 12 12. uh that's actually three

months so it's actually 12 weeks here which is good the longer the better

right but the support that i want to see is at least eight weeks so eight to 12 weeks is just

fine and again if you're interested in the notes i'll be happy to give you the notes uh so wait until the

end of the video and i'll let you know exactly how to do this so this is step number one we're selling puts collecting

premium the basic idea here is that we are buying stocks

at a discount or as many people would say right now buy the dip and this is something that has been working really really well

it's something that warren buffett has been using for many many years and this exact strategy of uh of selling puts is something that warren buffett has been doing for many

many years to scoop up stocks at a discount but let's talk about the next step here let's talk about step

number two uh let me just see there we go so step number two

is you may or may not get assigned and what does this mean so

first of all it means that if the the price and expiration of the

stock is below the strike price that you sold then you have to buy

the stock and i'll show you some example here now um in this case if this is happening

then you would go to step number three which i will share with you in just a moment

now if the price is above the strike price at expiration

and uh this is strike price then nothing you just keep the whole premium

and you would go back to step number one so this is why it's kind of called the wheel because we keep

doing this right and now step number three um when we are assigned we will sell

calls and collect more premium so this this is the strategy in a

nutshell and as you can see it is not really complicated the trick is really to

trade only the best stock so i want to make this here in dark green

and you gotta look for solid support levels uh let me just show you a few trades uh

that that i've seen that i don't think are the best trades so um let me just go

back here to my handy dandy ipad and show you a few other trades so as an example um workhorse

some people have been trading workhorses and sold the 38 put and you see this where i

think um if you're doing this yeah if you're sold the the 38 put this super aggressive and if this part of your strategy is fine if you look back over the last eight to 12 weeks where do we see support we see support one two three four five times here right so this would be a solid support level now workhorse dipped way below there but you see you would not be in as much trouble if you're selling the support at 20 and then you can sell calls and collect premium so this is absolutely fine here um what is another one that i that i saw somebody do it's uh i can't remember oh yeah now i remember it's a hyln so let me just uh show you this i mean first of all hyln i don't even know what these guys are doing right and uh so i talked to somebody who actually here sold uh something like this a 21 or 22 put right here well i don't know about you but i don't see any support here right so you want to go back over the last eight to 12 weeks and see if there's any support now you might say well maybe there was support earlier but honestly look at this i don't really think that there was a lot of support there so make sure that you're selecting the right stocks and i will show you in a moment of how to do this so this is super super important that you trade only the best stocks and you look for support otherwise you can be in deep deep trouble now let's talk about the second thing

The Tools

that you need because i said here's what you need if you want to trade for a living a trading strategy powerful tool so let's talk about the tools that i personally use and if you have been following me for a while you already know that the tool that i use is the powerx optimizer now here are the two things for me personally that are super important uh when we are picking the right tools so first of all i want to have a scanner built in and the scanner finds the best stocks to trade also the scanner um tells me what strike price to trade and it also uh tells me what expiration and you see this is where uh the the three important things you need to know what are the underlying stocks right so i'm uh marking this here a grand in green and i'm also highlighting it uh then you need to know when you're trading options the strike price and uh the strike price is something that powerx optimizer tells me and also which expiration and when it comes to expiration already told you in broad strokes i'm only trading uh one to two weeks out but should i trade this week's expiration or next week's expiration right this is super important so therefore this is where a tool helps me now the second thing is uh which for me is super important that the tool actually has a calculator and with this calculator it tells me exactly how much premium should i get right i mean how much risk is involved in this trade right so these are the important things and then of course also how many contracts should i trade based on my account so if you think about this when you're trading options you know the important things are that you know what is the underlying

stock that you know what strike price what expiration what is the minimum premium uh you want
of course to know the risk and i'm making this red because risk is red right and also how many contracts you should trade and i'm marking this in green here really quick so that you see it so let me show you exactly of what i'm doing here and how i'm finding these stocks so here we see the power x optimizer i'm switching over here to the handy dandy ipad so that you can see it and again at first i want to show you the wheel calculator uh i really stay on this just very briefly because i don't want to give you here a full tour of the software if you're interested in the software and what it can do i'll leave a link in the description you can book a tour with paul who is a trader like you and he'll be happy to walk you through everything in detail but just so that you get the idea so here for example if i'm looking at the scanner let me just show you where it is and what we are looking at so we are looking at the scanner right here in the bottom this is where the scanner actually gives us a bunch of symbols that are candidates to consider right now now one of the things that we need to do is we need to make sure that we only pick the strong stocks and that we only pick those that have a good support level so one of the examples of a stock that i've traded recently is neil and when i click on neo here as you can see what it does it actually shows me in the data window right up here what strike prices i should consider right now it also shows me uh what premium i can get and how much this would be annualized so if we now switch over to a chart and we look at neo and we see that we have a level let me just zoom in a little bit um yeah can't zoom in right now i don't know why it's okay right you get the idea um anyhow so we are looking here at a strike price of around 37. so let's just do this and what my ipad does right now it does not respond at all the good thing is i have a backup plan so this is where we have everything here as well on the desktop so let's go to to neo and uh what power x optimizer told me is that right now i could sell a strike price of 36 let me just mark this here and uh this is a strike price of 36 right and i would get some decent premium for this let me just make sure that i'm hitting this level exactly because i'm a little bit down here so there we go now we always want to go back over the past few weeks and uh there we go now i can use my ipad again because i'll really love it if i can draw on this by the way do you find this helpful if i'm showing you very specific examples here uh for this stock because then i want to show you neo on the ipad here really quick so that we can look over the past six to eight weeks here we go switching over to the ipad um we are going to the 36 level right here okay and we're looking back over the past eight weeks so pretty much until uh somewhere around here beginning of december this would be 12 weeks and you see it touched the level once twice uh

there's another didn't go as deep here it touched the level and then it bounced back so what do you think does this look like a good level the 36 level again you want to look for very solid support here and this is where for me this looks like a good trade now the next thing is and this is where power x optimizer helps you that you see exactly here uh how much premium you can get especially if you're looking at it annualized right and uh so let me just do the following uh i want to get rid of well one of the things that i did let's just get rid of apple here and add neo to the equation here so now i'm adding neo here and again what i want the software to tell me is um let's zoom over here we're looking at this column here with neo right what is the minimum option premium that i should get to get at least 30 annualized because for me that's what i want to do and this is how i was able to make more than 50 000 thus far this year and it is only march 12th and i started on january 11th this is why yes i did it really in eight weeks it also i want to know how many options should i trade based on my account how much in premium would i collect and what is the premium per day that i would make so how much money per day do i make when trading this and this is where we go back to why it is so important to have a tool that shows me all this because let me ask you how else would you know all this i mean if you try to do this manually i don't know i mean for for me this is almost impossible to do it so and uh believe me no professional trader does this with only a calculator or a cell phone in his hand right so super important here uh when it comes to tools you must know your numbers trading is a numbers game trading is a numbers game if you don't know your numbers it will be really really difficult for you to make money and the other key question is if you don't have a tool how else would you find these trades how else do you find them i mean every single trade that i did in this account here that you see over the past eight weeks that have yielded to what fifty two thousand dollars every single one has been taking from this scanner i mean i would not be able if you would force me right now to trade without the tool i couldn't do it i i want to be honest right this is where i believe that having powerful tools like the powerx optimizer is giving you an unfair advantage because think about it when trading you are trading against other traders so you don't have to be the best trader in the world you just have to be better than the other traders so you need to have an edge and this is where i must say this tool is actually giving me giving me an edge and if you want you can even say that it is not only an edge you could call this if you want to an unfair advantage when you see when it comes to trading i mean play every ace you don't want to show up with a knife to a gunfight right i mean you're trading against the smartest traders in the world so make sure now this brings me to uh

The Right Mindset

the last point here of how to trade for a living and this is having the right mindset now let's talk about mindset and uh this is something that many traders underestimate because they think

oh you know what that's fine i just need a strategy and i need a tool and uh i will just be fine and this is

okay no this is not especially uh if you want to trade for a living so the mindset for trading for a living is that first of all you must be focused on what i call src profits and this is what

this stands for it stands for systematically systematically it stands for repeatable and it stands for consistent so this is the the src

and this is why this is so important you see as a trader for me at the end of the month i'm wiring money

out of my account out of my trading account into my personal account

sorry i'm a little bit ocd here so this is why not ocd i just have ocd tendencies

anyhow so this is why it's great when you have windfall profits it is you know what

if recently you participated in the gme in the gamestop hype and you double triple quadrupled many

maybe 10x to your account good for you congratulations and i really mean this

however can you do this again this month what is the next stock that is going crazy like this or if you

have been able to capture in on the tesla ride all the way up good for you but what

happened when tesla went from 800 to 500 did you take a hit in your account see this where it is super important

to have these src profits now another thing that is super important when it comes to trading for a living is that you have patience and here's what i mean what it means

you gotta grow your account systematically so and how do you grow

your account systematically systematically there we go yeah if you don't have a trading strategy this is why it's so important to have a trading strategy that produces these

src profits the systematically cons repeatable and consistent profits so

you see how it all comes together i mean this is why there's these three pillars

the trading strategy the tools that are supporting your trading strategy and the mindset now the other thing

is that when you are trading patience means that you can't panic and

i talked about this several times here on the channel and you see this where recently people started talking about

these diamond hands and i i think the way how some people

talk about diamond hands is just holding on to a losing trade no this is not the case but basically what

it means with patients is let the trade play out

right and how do you let the trade played out well you must you must have a plan and you see for me it is so important to have a plan and to follow my plan that i actually have a mug that says

follow your plan and this is facing me pretty much all day long looking at it like this and

by the way if you want to have this go to store.rockwelltrading.com it's 9 or 9.50 or something like this

and a really great reminder now what is the key here that you follow the plan but in order to follow a plan you must have a plan right so this is where it goes

back again to trading strategy so super important here now i know that there is a quite a few questions but i want to give you a quick summary of what we have done thus far

so uh if we look at a summary and again i'll be happy to give you the notes here if you want them if you

find these notes helpful and if you want to take a look at them so kevin from my team will make them available um nicole nicole can you let everybody know where they can get the notes so you need to go to rockwelltrading.com app i'll repeat it in just a moment

so summary first of all is it is it possible to trade

for a living and the answer for me is yes because that's what i'm doing

now uh doesn't mean that you can do it again this is why it's so important that you practice on a paper trading account

first so um you you got to have the right trading psychology

how the heck do you spell psychology there we go right and uh the trading

psychology here is that you're aiming for src profits and not the uh the yolo every

now and then and uh how to start trading

for a living what are the things that you need you need to have a strategy you need to

have the right tool you need to have the right mindset now if you are looking for a strategy

today i presented to you the wheel strategy which i think is a great trading strategy because it's it's

simple to understand and it gives you an edge right you also want to have the right tools and for the

right tools i might be biased but i think powerx optimizer is the best tool not only for trading this strategy but

also for trading um the the power x strategy here and the mindset we already talked about

this so in a moment i will look at your questions here but has this been helpful

at all because if it is do me a favor right now and click on like really quick uh when you can smash the like button or

you can just gently double tap it which is fine as well and uh let's just get

Deep Dive Q&A

uh get going here and look at some of the questions that you have and i

appreciate you being live here joining me live and this is where uh yes

i'll bring you on to the show here so cirque du soleil says uh it works my

account is up 75 that's great okay teresa so good to see you here happy friday

and um fausto says um okay uh has been trading paper uh power

x optimizer uh 21 wins 15 losses and one win on my first wheel trade that's great and you

see foster the good thing is that you are trading on a paper trading account

and a simulator it's super important in the beginning just need to make sure that you know

what you're doing so anyhow uh stan says thanks for the book oh yeah if you're interested in the

power x strategy we already have the book available right now so you can go to my website there's a

link in the description order the book it's 4.95 which covers shipping and handling not

quite but i'll be happy to do this now for the wheel the book is coming uh

it will be available april 9th and very soon we'll take pre-orders we have a list uh you can put your name

on a list if you would like to know when this book is available and we'll probably also offer it for 4.95

and as you can see it's a nice book 160 pages uh with all the rules that what you see in here

so if you enjoyed this video you're gonna love these books anyhow so good

to see everybody here and yes andreas this is a wheel traders community here
okay so uh chad has been trading the wheel for some time now would look at it i looked at here
as results thus far for
the quarter 48 analyzed gain and you see this is what i'm shooting for uh 30 annualized and the
more you trade
it the more experience you get and the the more you're making no more mistakes right and you're
going to make mistakes learn from your mistakes okay so frank says when you sell the
puts you always say it's best to go when the price is going down does it mean that i want to sell
calls when i want to sell calls prices go up
yes so in a nutshell you want to sell puts when prices are going down because then put premiums
are
more expensive you get more money selling puts and when prices are going up you want to sell
calls
absolutely absolutely good good good all right so um
ron says what do you mean by a simulator you see there are brokerages who offer you a
simulator i'll cover it in next
week in one of the upcoming videos uh which means that you get fake money so you get like 50
000 or 100 000 and it's not real money you can place orders and uh the software pretends that
you're placing these orders live in the market and this way you can get a feel for it and it's super
important i'm gonna do a coffee with marcus around it next week so make sure that you
subscribe to the channel hit the little
notification bell because this way you get notified whenever i release a new video here
okay good and cirque du soleil says yeah iv implied volatility is the key
for selling higher premium and this is why you want to have stocks that are volatile
and yeah everything will be okay and rm says yeah right is a good example of
risk involved so wright came out today with news not right but hindenburg
the hindenburg report said well right is a problem and yes i do own stocks in right so we will see
if i might have to fly a rescue mission for this i didn't do anything just yet because the news
broke today i'll see how it
shakes out today we saw an initial reaction but then immediately we were going back we
can actually just bring it up here really quick um because yeah i'll talk about right
more on monday because i think it's it's super important so with right here
you see we saw an initial reaction a gap down uh then we were trading higher post market right
now we are trading higher
i'll talk about it in more detail next week but yeah you're absolutely right uh when trading
there is risk involved if there would be no risk everybody in his grandmother would do it okay
anyhow good uh sir roland says
uh does marcus that would be me make all of his money selling options or does he also trade
stocks and if he trades
stocks how i will cover this in one of the upcoming videos so i promised uh probably another
two weeks so stay
tuned and i'll show you also how i trade stocks so i will play stock trades together with you that
you can
follow along if you want to so um anyhow let's see and timothy says yeah i
trade two strategies the power x and then the wheel strategy again more information

in here if you want 4.95 cents it's a deal it's a steal on amazon it's like 25 bucks or something like this

okay so we shall see and yes we will talk about right next week absolutely um

good so let's see what else do we have here uh roland says i love it when it says good good good uh you know what

actually the team made fun of it and made a mug we have a mug that says good good good so if you want this go to

the store we're selling these mugs at cost really it costs us nine dollars or 950

to make a mug like this but there's one with good good good if you want to have this

julio i will talk about right next week as i said so right now um yeah

no uh yeah we will talk more about it next week because i want to do it when the markets

are open and i want to see how all of this is shaking out here okay uh brian says

do you ever feel cheated when you don't get assigned selling calls makes more money that is true and you see there's a brian i'm glad that you're bringing it

up um there are people who are afraid of getting assigned they always say i'll get assigned if you are afraid of getting assigned you didn't do a good job picking the right stock because you're absolutely right selling calls is very

very lucrative if we hop over to my account here and uh if i'm sorting the p l by

uh by size i was assigned gdxj made fifteen thousand dollars on it

i was assigned win made eight thousand seven hundred dollars on it i was assigned uber made fifty six hundred dollars in it i was assigned hell

made uh thirty six hundred 600 on it apple right see the ones that we are assigned are

the ones that are really really killing it so yeah absolutely getting assigned is part of the game

this is why i brought it up earlier let me just jump back here this strategy

consists actually of three steps not only one step if this is you if you only want to sell

puts and collect premium there are other ways to do it the wheel strategy is three steps

selling puts getting assigned selling calls glad that you bring it up so um this is where stones do you ever

roll calls if the price above the strike or let get just get it assigned this is where coming back to this right

i like to have it getting assigned and then if the stock gets called away i can

actually um yeah i can sell more puts and start the wheel all over

again which i like to do anyhow great great question here um [Music]

so let's see what other questions do you have um can you use etfs or s p 500 as

collateral for margin instead of just cash talk to your broker your broker can explain it better than i can

i did a video on trading on margin i'll link to it in the description i think you're a little bit confused here

so i'll watch the video it's maybe eight or ten minutes and we'll explain you everything you need to know for trading on margin okay good so good to see everybody here

um so christopher says what is your screening criteria to find the best stocks i actually did a video on this uh it's how

to find the best stocks for the wheel i'll link to it in the description i did it two days ago i believe on wednesday or a monday but i

did it so i'll uh i'll show you all of my criteria in this video we'll link to it in the description and also here in the chat christopher uh you can take a look at this okay

good and uh yeah it's best uh money sell puts when the stock is down exactly exactly
okay uh so jay sandy says how are you getting high premium on support on these stocks only
two weeks out this is where you
need to look for more volatile stocks and this is where again i'm going back to this i could not do
this because the question is how do i find these stocks or how do i get this high premium
i could not do this without this tool right if i didn't have the scanner i don't
know i would find it i would probably never find it never ever in my life here anyhow good good
good
all right uh so yeah this is uh playing theta and uh so stockboy says how much
is the service per month you know right now i still do have a service it's called power income
alerts
um i i don't know how much longer i will offer it because honestly i think it is much better when
you have a tool and you can do it yourself i mean do you really want to rely on on me sending
you alerts or would you
rather have a tool that gives you every day like clockwork the best stocks i mean this is what i
see i'm just using this
tool to issue these alerts so you might as well invest in the tool and then have it for life and never
be
dependent on anybody including myself so don't be don't be dependent on anybody
okay so uh jaisani says how many trades do you have open at once a maximum of five
so five trades that is my maximum that is my comfort level this is what i recommend
if you are trying to put on too many trades you might actually force trades uh i recently
talked to somebody who said okay i want to have at least 10 trades open and this is when you
need to
scramble to find the trade so i think five is for me the magic number here okay
yeah and jeff says it's a one-time price for the software yeah the software is not a subscription so
it's a one-time
investment and uh i also believe it's the best money you'll ever spend
okay good good good so um kelvin the handy-dandy ipad has failed
you for the last uh time you know i have this is a crazy thing last weekend i bought a brand new
ipad i
brought a brand new pen i brought a brand new keyboard i spent 17 or 18 hundred dollars and
i've been
so busy over the past few days because we're releasing a new version of powerx optimizer
and we actually start beta testing it internally or alpha testing or whatever you call it
on monday i am so super excited so probably in the next two to three weeks
we will release a brand new version and this has kept me so busy that the ipad that i bought is
still
laying right there on the shelf i haven't even unpacked it i promise i'll do it this uh this
weekend okay good um that so good to hear uh that these real life examples are
helpful that's perfect and yes i need to unpick this here the ipad that i'm using
um so where i'm doing all the magic here this is a a first no second generation ipad it's a
second generation ipad so it's a super old what is it like four years old or something like this and
yes it is
it is failing so i give in i give in so json he says how many contracts do i
do this really depends uh this is where you go back when you show the ipad right of what the

calculator tells me how many contracts i should trade you see right here
it says you see it on the screen right so for apple for example i did eight contracts for gdxj i did 20 contracts
for neo i would do 27 contracts if i did that so anyhow that's uh
that's what i do uh calvin says mark is my favorite scotsman do you think that i'm scottish if you think that i'm scottish you are mistaken i'm german
100 german um first generation second third no
whatever generation no i mean my my parents grandparents grand grandparents i mean my roots are in germany i moved
to the us uh in 2002. what is that almost 19 years ago
so the accent that you're hearing is or supposed to be a german accent maybe blended in with tech snacks and
anyhow so um [Music] frank said uh traded the 37 put on neo
great for you it's frank so you got you see you see the same that i see when you're using the same tools here
okay all right fantastic uh joad says after two weeks selling puts
with a ten thousand dollar account we have made 251 dollars and you see that's where it's important
it's so important that you have the right mindset and you grow your account systematically you see i i rather have you make 250 dollars in two weeks and be able to repeat this again and again and again this is how you grow your account super super important so yes thanks for sharing this um stay with it okay good good good so what else do we have
here i i love it how um you are actually answering questions uh for me jeff really appreciate it jeff and i talked recently jeff is in alaska and it was what brutally called how much was it was like 20 below or
something like this or 30 below it's crazy yeah so uh jeff jeff is part of our mastermind here anyhow good good good let's see
what other um what other questions do we have okay so uh magic kabbalah says what is the main difference between the wheel and theta king both are selling put this correct and
theta kings actually stops right here so theta kings is only selling puts so you never ever with theta kings want to own the stock it's another strategy that i like to trade during market crashes
so i traded this strategy last year i i really started it almost a year ago
and uh was able with this strategy to double an account in a matter of uh what six or eight weeks something like this
there's videos on this channel here if you want to look for theta kings you see what i did and this is perfect when the market is
taking a nosedive here so magic uh kabbalah this is the theta kings okay good what else do we have
um so gerald says do you invest in long-term stocks as well as trading the wheel or just trading i'm not a long-term investor my investments are in real estate uh i used to own apartment complexes i
just sold my second apartment complex last week i sold it for 4.3 million
uh something like this and right now i'm looking for new apartment complexes so here i'm trading for a living and then i'm

investing in real estate to just grow my net worth so this is why
i personally do not like to buy and hold stocks for a long time here
anyhow so mick says it's a nice tool but the entry price is very expensive for small accounts
would be excellent if there was an
option to make multiple payments over time make you know what contact my team
call or text the office or shoot a text shooter email to support at rockwelltrading.com talk
to them let's see what we can do for you right make if you are serious about trading if you want
to
have the tool and if you say right now you're in a spot where you cannot um where you cannot
afford
the one-time prize which i think is very very reasonable uh contact the office and see what they
can do with for you uh they can probably help you okay good good good uh all right let's
see what other questions do we have so uh tom says uh we need a small program
to get started with your company kind of for the one shot deal same for you uh tom please caller
takes
the office um see if we have a deal right now uh often uh the team runs specials i don't
even know about this because i i love trading and i love talking to you
right so i i'm not too involved in the business part here i just need to make sure that we can
actually pay the development team that we can pay for the data so this is why we are charging a
price for it
and it also makes sure that we are only interacting attracting traders like you who are serious
about
this and this is the main criteria for me and also my team when we see that you're serious about
trading
we'll work with you we'll find something just uh contact the team uh call text email whatever is
easiest
for you and i'm sure that they can help you out all right fantastic while time is flying when
you're having fun well today we were talking about how to trade for a living and i hope
that you caught the whole presentation if not the good thing is it lives on the youtubes forever
i'm going live three times a week on mondays wednesdays and fridays make sure that you
subscribe to the channel hit
the little notification bell this way you get notified whenever i go live and i will go live again in
45 minutes from
now uh that's what i do quick stock market updates in five minutes or less my daughter vivian
actually said i
should call it markets with marcus and i think it's pretty catchy what do you think markets with
markets
and it's uh five minutes at five o'clock eastern time so uh tune in and i will see you in the
next video oh make sure that you share this video with anybody uh who you feel might benefit
from it
share it on facebook share it on twitter share it on reddit share it wherever you want okay have a
great
